FAREBOX RECOVERY

- Farebox recovery, also known as the fare recovery ratio, is a metric that quantifies how much of a transit system's operating expenses are covered by passenger fares. It's calculated by dividing the total passenger fare revenue by the total operating expenses.

FAREBOX RECOVERY – PEER COMPARISON

Source: National Transit Database 2018-2023, Peer Agencies group of ten cities as listed in the UTA 2023 Annual Comprehensive Financial Report.

Definitions: Average is the annual farebox recovery ratio for all Peer Agencies. Upper is the highest farebox recovery ratio for a given year. Lower is the lowest farebox recovery ratio for a given year.

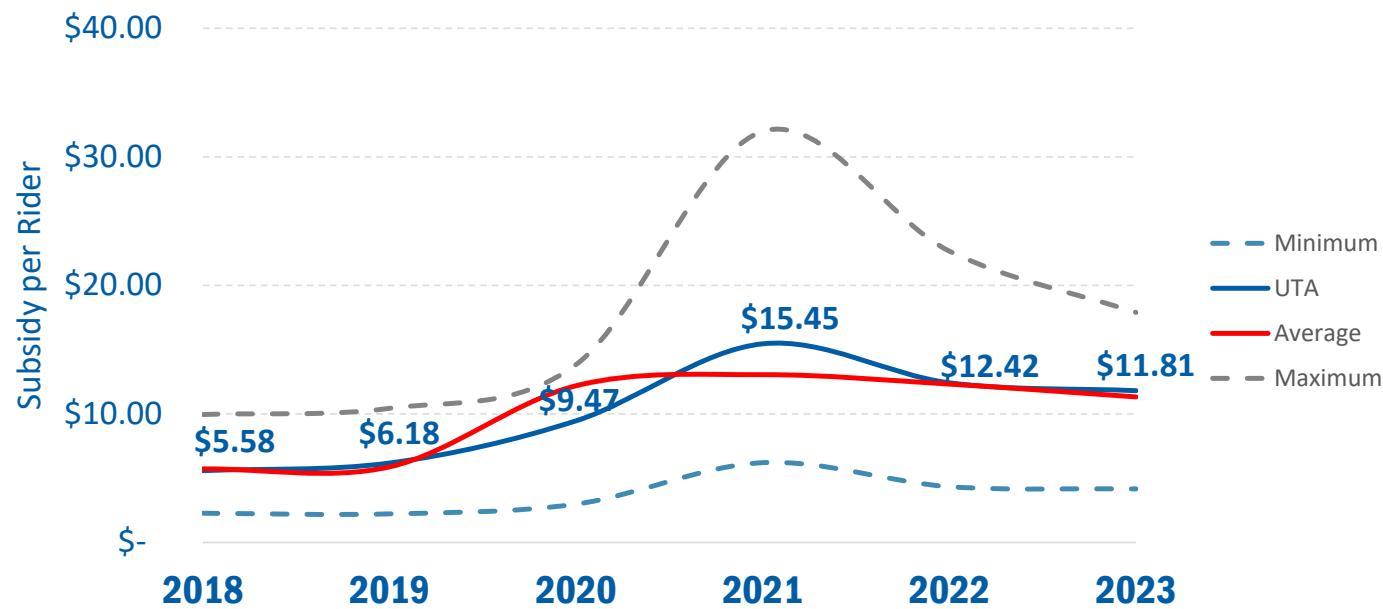

SUBSIDY PER RIDER

- A subsidy per rider refers to the amount of operational expense allocated to an individual rider less the cost of their transit fare. It also represents the other sources of revenue (sales and use tax, Federal preventative maintenance, advertising, investment income, and other revenue) beyond amount collected from fares.

UTA SUBSIDY PER RIDER – PEER AVERAGES

Source: National Transit Database 2018-2023, Peer Agencies group of ten cities as listed in the UTA 2023 Annual Comprehensive Financial Report.

Definitions: Average is the annual subsidy per rider for all Peer Agencies. Upper is the highest subsidy per rider ratio for a given year. Lower is the lowest subsidy per rider for a given year.

KEY FINDINGS

- All transit agency operators experienced significant drop in Fare Revenue post COVID-19 (2019)
- Farebox recovery ratios have not recovered to pre-COVID-19 levels
- Subsidy per rider has increased since COVID-19 period

Elasticity Approaches

- **Simpson-Curtin Rule:** A simple elasticity rule: 3% fare hike -> 1% ridership drop (elasticity of -0.33)
 - 1968 paper authored by John Curtin (of Simpson & Curtin)
 - Data collected from 1940s-1960s
- **Pham and Linsalata**
 - American Public Transportation Association, and widely used for transit planning and modeling in North America
 - 1991 paper, data measured in 1980s; 52 U.S. transit systems (bus)
 - Elasticity impacts between “peak” and “off-peak” riders
- **Todd Litman, Victoria Transport Policy Institute**
 - 2004 paper, explores elasticities and cross elasticity across modes, income and access to alternatives

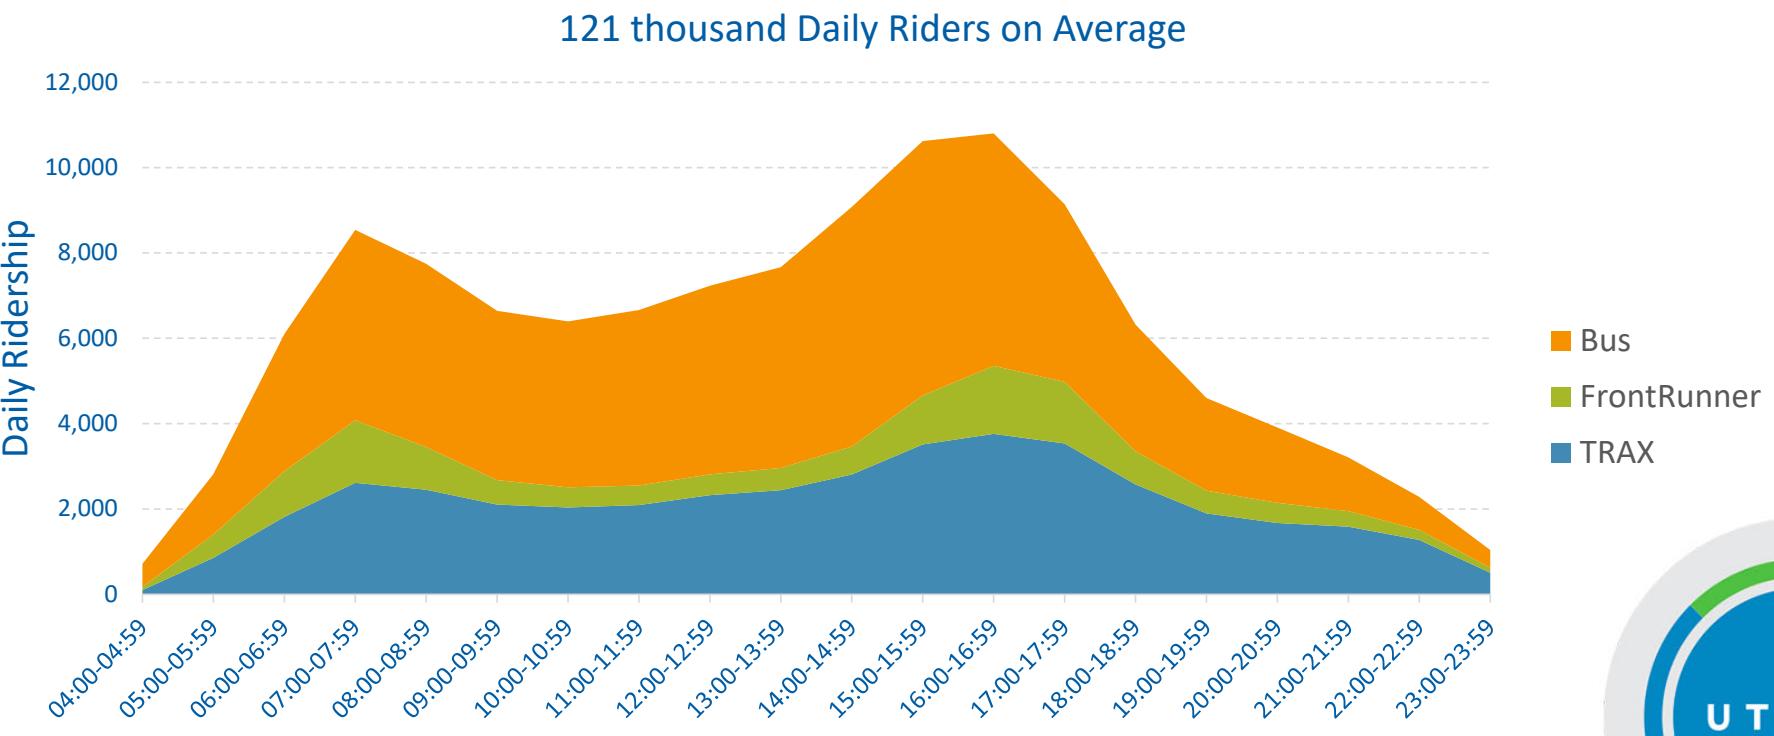

FARE ELASTICITY

- Fare Elasticity measures how sensitive the demand and supply of a public transit is to changes in fare price.
 - **Fare price Elastic** is defined when fare price changes greatly affect the supply or demand of transit services.
 - **Fare Price Inelastic** is defined when fare price changes have a minimal effect on supply and demand of transit services.

Off-Peak	-0.33	-0.18	-0.46	-0.46

Emissions per passenger mile travelled shows how efficiently UTA moves people

As our service expands, total emissions will naturally increase, but this metric reveals how our fleet is reducing greenhouse gases on a per-person basis. It also helps us demonstrate the environmental benefits of choosing transit over driving alone.

Agenda Item 10.b.

Sustainability Plan

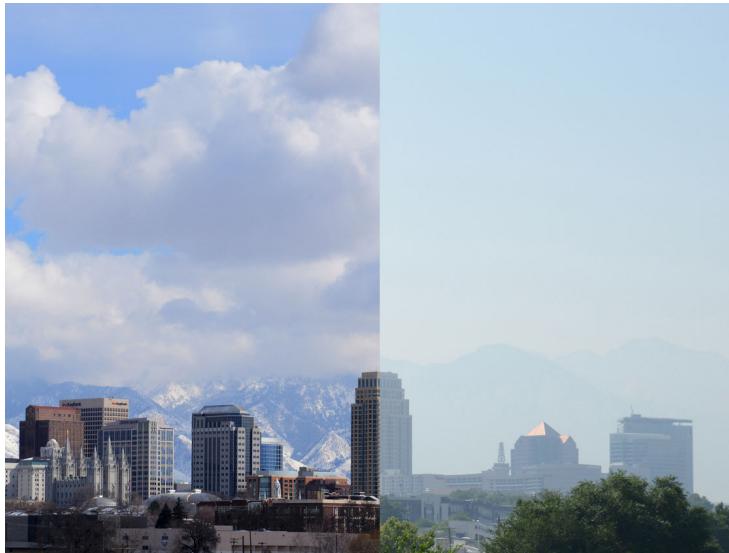

Our new plan maps out actionable strategies for 2030 and beyond to help guide UTA towards being a leader in sustainable transportation

Understanding GHG Emissions: Scopes 1 & 2

- Scope 1 (Direct): Emissions from UTA-owned sources like buses, trains, service vehicles, and on-site heating.
- Scope 2 (Indirect): Emissions from electricity UTA purchases to power trains, buildings, and systems.

Agenda Item 10.b.

Energy

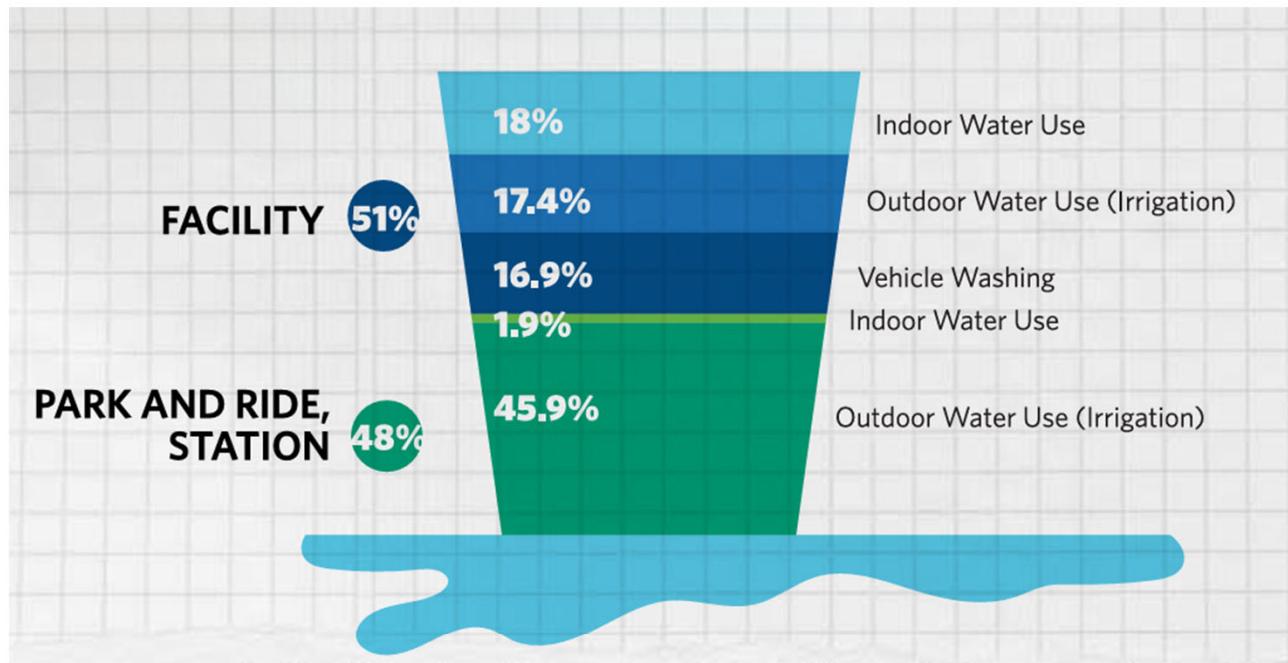

Energy consumption plays a significant role in our total carbon footprint, and the goals outlined in UTA's new sustainability plan are designed to reduce energy use through improved efficiency, strategic infrastructure investments, and operational best practices.

Agenda Item 10.b.

Water

This graph shows total water use in 2023, establishing a baseline that informs future water reduction goals outlined in UTA's sustainability plan.

Waste & Recycling

In 2024 UTA's Green Team was able to tour Salt Lake's Material Recovery Facility and see what happens to materials once they leave UTA facilities and start the recycling process

Agenda Item 10.b.

Sustainability Infrastructure

UTA's sustainability infrastructure goals define a strategic approach for developing resilient systems that will champion and sustain long-term environmental stewardship.

2025 Sustainability Projects

Warms Springs LED pre-inspection walk through with Rocky Mountain Power. Projects like replacing existing bulbs with LEDs helps UTA in their goals to reduce energy use.

2025 Sustainability Projects

UTA worked with a local recycling facility to shred our old bins into plastic polymers and make new uniform trash and recycling bins, making this a closed loop recycling project keeping 100% of our old bins out of the landfill

Agenda Item 10.b.

2025 Sustainability Projects

In partnership with Greenbike, UTA employees are eligible for a free year-long membership. In 2025 289 employees have taken advantage of this wellness perk.
