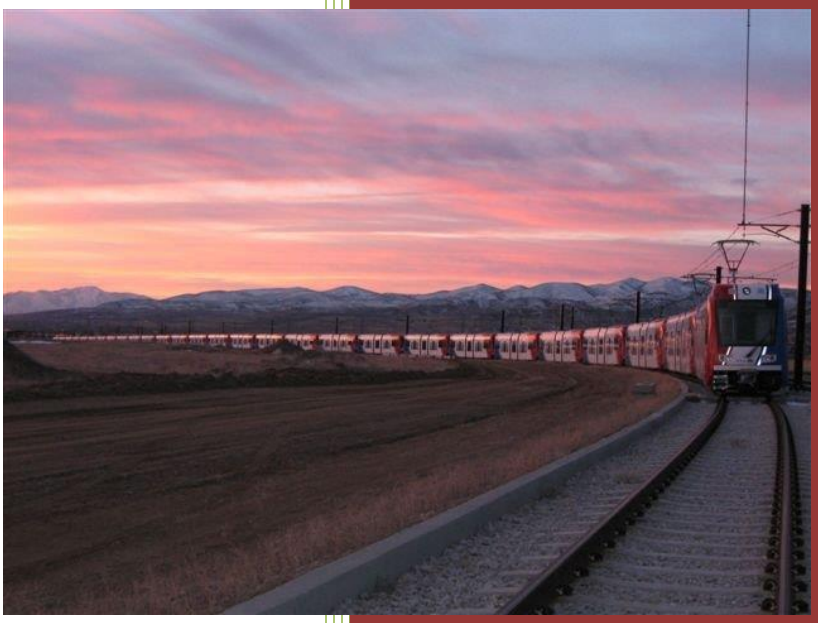
2024

Utah Transit Authority Transit Asset Management Plan 2.2



State of Good Repair Department

Utah Transit Authority

9/1/2024

Table of Contents

Version Control Sheet

Date (MM/DD/YYYY)	Version Number	Changes Made Summary
9/10/2018	1.0	Initial Version
3/31/2021	1.1	Change in Accountable Executive Updated TAM Policy Introduction of Senior Asset Management Committee Updated Investment Prioritization Guidelines
02/16/2022	2.0	Change in Accountable Executive Update for 2022 Modification to Senior Asset Management Committee Updated Titles for Committee Members
11/17/2022	2.1	Update for SD (LRV) Fleet Replacement Include UTA Five-Year Capital Plan in Appendices Include SGR Project Risk Assessment Results in Appendices
09/01/2024	2.2	Update for biannual Board of Trustees approval Removal of Senior Asset Management Committee Include 10-Year Plans for Facilities, Revenue Vehicles, & Service Vehicles

Accountable Executive Approval Sheet

This document outlines the Utah Transit Authority's approach to Transit Asset Management in accordance with 49 CFR Part 625.

As the Accountable Executive, I acknowledge that I have reviewed this document and found it consistent with UTA's approach and commitment to keeping its overall operation in a State of Good Repair.

_____ _____

(Jay Fox - UTA Executive Director) **(Date)**

Introduction

The Federal Transit Administration delivered to Congress in April 2009 the Rail Modernization Study. The study focused on seven different legacy transit systems: Chicago Transit Authority (CTA), Massachusetts Bay Transportation Authority (MBTA), Metropolitan Transportation Authority of New York (MTA), New Jersey Transit Corporation (NJ Transit), San Francisco Bay Area Rapid Transit (BART), South Eastern Pennsylvania Transportation Authority (SEPTA), and Washington Metro Area Transit Authority (WMATA). This study found the amount of deferred maintenance costs in these transit systems was estimated to be $50 billion and nationwide at $80 billion. The findings of this study resulted in an emphasis on the State of Good Repair (SGR) of America's transit providers.

In October of 2012, Congress passed the Moving Ahead for Progress in the 21st Century Act (MAP21) legislation outlining requirements agencies need to meet to start addressing SGR needs in their respective areas of service.

In October 2016, the FTA published the Final Rule as directed in MAP21. This rule requires agencies to certify the Federal investment in transit is in an SGR. This rule requires Utah Transit Authority (UTA) certify each year demonstrating our transit system is in an SGR. Certification UTA is in an SGR is a snapshot in time capturing the condition and function of the assets tracked by the Capital Programming & Support Department in the Transit Asset Management System (TAMS).

Part I: Asset Management and State of Good Repair (SGR) at UTA

Utah Transit Authority recognized early the need to maintain and operate all elements of the transit system in a safe and efficient manner. The importance and recognition of the correlation between Asset Management and the reliability of the system by UTA has allowed early development of a compliant Transit Asset Management System (TAMS) prior to FTA issuing the final rule.

For the purposes of the TAM Plan, the term Asset Management refers to the process UTA will follow to maintain a state of good repair. It refers to the high-level approach needed to align UTA's budget decisions with agency goals and objectives. The process is outlined in this document.

> **Asset Management is the key to identifying problems before failures occur that can cause unplanned outages and disruptions in service. An effective Asset Management program will maintain a safe, efficient, and reliable transit system for our customers and keep the public investment in a State of Good Repair.**

To deliver on this philosophy, UTA must maintain the infrastructure at a level meeting the demands of our customers in terms of safety, capacity, capability, reliability, accessibility, and cost. Successfully meeting this goal ensures the long-term viability and acceptance of a fully functional transit agency for current and future taxpayers.

To successfully manage UTA's assets, it is necessary to develop a clear management process facilitating effective and proactive maintenance of the infrastructure, revenue vehicles, facilities, and equipment over $50,000 (including all non-revenue support vehicles). To accomplish this, UTA has defined a path to achieve the end goal of accurate long-term budget projections showing the future funding needs of the agency. The elements currently contained and tracked within the TAM system are shown in Figure 1.

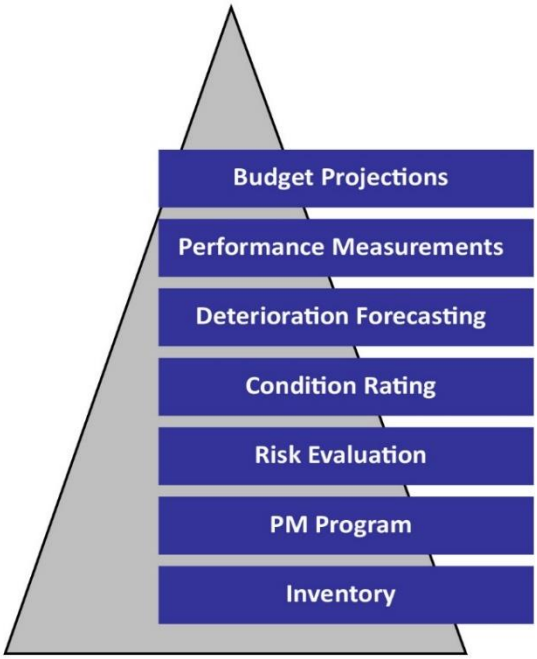


Figure 1- Elements of a Financial Output

As UTA continues to refine and develop a comprehensive TAM process, additional areas may be added based on need. It should be clearly understood with respect to rail service - UTA is a young transit agency. Development of a comprehensive TAM system will take many years. The SGR Team believe development of a comprehensive Asset Management System is a journey not a destination. They firmly consider this process will never be completely "finished". New and better methods will be found and implemented to improve the value of the end product.

Inventory

UTA has spent numerous hours working to verify its inventory information. As a result of these efforts, three major decisions were made early in 2020 which will streamline the inventory information gathering process:

- JD Edwards (JDE) will be considered the system of record for all asset information.
- Effort will be made to capture the necessary inventory information up front to address all the needs of UTA's service units prior to the actual creation of the asset.
- All assets will be created following the same process. Assets will be designated during the asset creation process as belonging to one or more of the groups listed below based on the asset's characteristics. Four groups were decided upon. These separate asset groupings include:
    - Accounting Asset
        - Any UTA-owned asset that meets the basic requirement of having an initial cost of $5,000 or more and having a useful life expectancy of one year or more.
    - Continuing Control Asset
        - Any asset, whether owned by UTA or by a grant sub-recipient, that meets the basic Accounting Asset requirements with the added consideration of having federal interest in the asset.

        - In other words, it is an asset that was purchased in part or fully using federal funds.
    - SGR Asset
        - An asset used in the provision of public transportation meeting the criteria outlined in the TAM Rule (49 CFR § 625).
        - Falls into four main categories:
            - Infrastructure
            - Revenue Vehicles
            - Facilities
            - Equipment
                - Equipment with a cost of $50,000 or more or is a non-revenue service vehicle, regardless of cost.
    - Zero-Cost Assets
        - Assets not meeting the threshold to be called an "asset" but tracked to help develop more comprehensive financial projections or requiring a PM the Responsible Service Unit (RSU) would like to track in JD Edwards.

This TAM Plan is intended to focus on assets that fall under the designation of an SGR asset.

Along with identifying an asset, other critical information has been captured to aid in the capital planning efforts. The information includes:

- age
- initial cost
- replacement cost
- design life (useful life)
- location
- and if applicable, GPS coordinates.

UTA, as part of each inventoried asset, is developing a performance metric defining the useful life of an asset. The useful life for each asset is unique to UTA and is influenced by how the system operates, the impact of the environment on the system, appropriate maintenance activities, and the quality of the item purchased. The useful life is defined as how long UTA believes an asset should last before it requires a total replacement. As a starting point, many of the useful life values were adopted from the FTA developed software program TERM-Lite. It is the intent of UTA to develop their own deterioration and performance curves for these assets specific to UTA's service areas. By understanding how long an asset should last, or should be expected to last, UTA can better plan for expected maintenance activities and replacements. Replacing or renewing the right asset at the right time in advance of failure provides the best use of the continued public investment.

The inventory hierarchies for the different inventory categories can be referred to in Appendix A of this document. Additionally, all infrastructure assets and facilities have been mapped in a GIS system to increase asset management practice options.

Preventive Maintenance (PM) Program

UTA has three elements to its PM program:

1) Inspection program
2) Tracking and analysis of maintenance efforts
3) Defined routine and capital maintenance programs

Inspections are the primary means by which UTA gathers the data necessary to determine the current condition of an asset. It is through these inspections that UTA will be able to determine when an asset is nearing the end of its useful life or if the asset is performing beyond previous estimates.

Inspection data is usually captured for different reasons:

1. Verification the inspections are taking place
2. Determination of the condition of the asset to produce an accurate lifecycle estimate for each critical asset
3. Comprehension by managers regarding PM activities needed to maximize the life of the asset

The final element in a robust PM program is to plan to pay for the required maintenance. In 2019, UTA adopted a budget philosophy commonly referred to as the "buckets". These buckets are programs in the five-year capital plan that are intended to address both the replacement activities and provide some capital funding to address more routine maintenance or rehabilitation. SGR assets have been assigned to these buckets as part of their inventory record creation. By using this assignment, the replacement cost data, and estimated rehabilitation data, UTA is able to spread the financial need more evenly across the years in the current capital plan. This also allows for a more streamlined and less error-prone approach for incorporating UTA's inventory data into the TERM-Lite tool and developing its long-term financial models as it relates to the SGR efforts.

Condition Ratings and Deterioration Curves

Condition ratings are numerical values which are used to depict the overall condition of an asset. UTA utilizes the TERM scale which is a 1-5 scale with 5 being excellent or like new and a 1 being a failed asset. In terms of SGR, any asset below a 2.5 would be considered not in a state of good repair. For reporting purposes, condition ratings are reported in terms of integers however, UTA does allow discretion in applying decimal values to the condition ratings and accounts for the rounding in its final reporting.

All SGR assets are assigned a Useful Life Benchmark (ULB) when they are created. This is the life expectancy value UTA assumes this asset will last. As assets reach 50% of their age relative to the assigned ULB, the SGR team will schedule visual condition assessments on a three-year minimum cycle. These condition assessments are for the sole purpose of determining whether further inspection by subject matter experts (SMEs) is required. Each asset's condition assessment results are calculated and stored as the Observed Condition Rating in JDE. Additionally, observed condition ratings are collected and stored in JDE as part of UTA's biannual inventory process.

These Observed Condition Ratings are considered when rehabilitation and replacement projects are being programmed. SMEs assist the SGR team with prioritizing asset rehabilitation and replacement schedules contained in the appropriate Ten-Year plan. UTA's budget determines the funding and execution for all Ten-Year plans.

For condition evaluations, the following applications are considered valid and acceptable means for determining the condition of an asset:

Age-

Age is the primary method by which a condition rating is preliminarily or ultimately determined. Age is used to determine the condition rating for vehicles, both non-revenue and revenue, equipment, and infrastructure (supplemented with visual inspections). It can be used as a preliminary indicator for facility assets like buildings, but the main consideration for building conditions, station conditions, and park and ride conditions, will be determined by physical observations on a rotating four-year cycle.

One primary item to note is for assets that are gauged primarily based on age, if a condition rating is determined to be inaccurate, the adjustment should be done in terms of either extending or contracting the useful life value of the asset. After the useful life value is adjusted, the condition rating should be recalculated to accommodate a straight-line deterioration approach.

Condition Assessment-

Maintenance and Administration Buildings, BRT and Rail Stations, and Park and Rides are all assets that are required to undergo a physical condition assessment at minimum once every four years.

UTA's Facilities group has agreed to take responsibility for these condition assessment efforts. Working in conjunction with the SGR group, a schedule is established at the beginning of the year and the items are inspected and assigned a physical condition assessment value. These values are consolidated into a master tracking sheet where the condition values for every aspect of the inspection are captured. This spreadsheet is then used to recommend targeted asset improvements for the coming year. Additionally, the SGR group audits condition assessments results on an annual basis. The audit covers a randomly selected 10% of completed condition assessments and is completed within six months of the year's last assessment being completed.

An example of the condition form is in Appendix J.

If UTA feels an independent third-party condition verification effort is warranted, this option may be pursued.

Scores have been collected and consolidated into a score tracking matrix. This matrix is included in Appendix K to help better support and show how decisions are being made regarding the Facility Asset Classes.

UTA's biannual inventory project requires each RSU to record updated Observed Condition Ratings for each asset, regardless of SGR designation. This satisfies condition ratings for both revenue vehicles, non-revenue vehicles, and equipment. More detailed condition assessments for infrastructure assets are conducted at least once every three years by the SGR team for assets reaching 50% of their ULB.

Deterioration Curves-

When UTA first started this effort, the concept of developing specific deterioration curves for asset classes was a goal UTA wanted to achieve. These curves are then used to better estimate future capital planning efforts.

Over the course of the years, it has been largely found that the values identified in the original TERM-Lite useful life table appear to be representative of UTA assets deteriorating under normal circumstances. There have been a few assets that have deteriorated in advance of their overall asset class useful life value; however, these appear to be the exceptions rather than the rules. Currently, the mitigation strategy for these early failure assets involves determining the reason for the accelerated deterioration and then making the necessary adjustments to help the asset reach the overall asset class useful life value. An example of this includes some early wear on some curved rail assets on UTA's rail systems. The appropriate mitigation strategy chosen included replacing these assets with head-hardened rail and adding rail lubers in strategic locations. After these mitigations were installed, the useful life value was set to the overall asset class useful life value.

In short, at least for the foreseeable future and with the addition of the yearly condition check, UTA will follow the approach of setting these asset class useful life values and managing the problem assets as they are identified.

Specific project development and budget plans will be developed with a five-year capital plan. The value of the long-term planning budget should not be underestimated. It provides a very real look of what anticipated costs will be in the future to maintain the system that has had inventory elements entered in the TAM system.

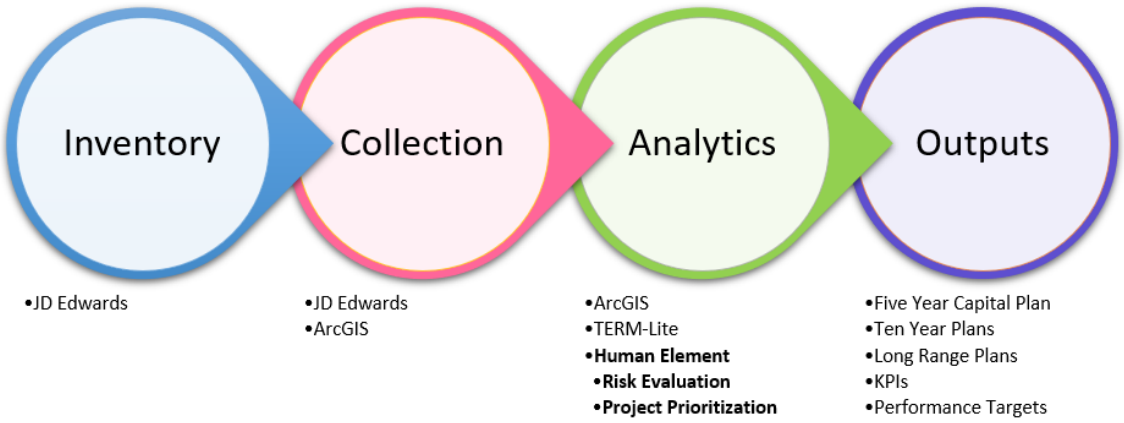
Budgeting

The UTA SGR team knows that the most critical element produced by an effective and fully functional TAM system is the development of both short- and long-term budget estimates. Most transit agencies today face increasing needs without increases in revenues. Without accurate budget projections it is not possible for transit agencies to plan for future needs. It provides critical input on decisions relating to expansion versus the need to maintain and operate what already is in place. We assert the expectation of the public is that expansion of an existing system should only occur when all maintenance and improvement needs are being met for what is already in place.

In the past, at agencies across the United States, oftentimes maintenance budgets were based on revenue projections and past budgets. Agencies gave funding to maintenance managers, who were expected to complete all required maintenance, both routine and capital, with their allotment. In many instances, the funding was not sufficient. While UTA recognizes funding is finite, it also recognizes there are other ways

to determine maintenance budgets and it will attempt to base these budget amounts on priority and risk. Figure 2 is an outline of a high-level process showing the components necessary to achieve this financial plan objectively.

Front End of the Planning Cycle



Back End of Planning Cycle

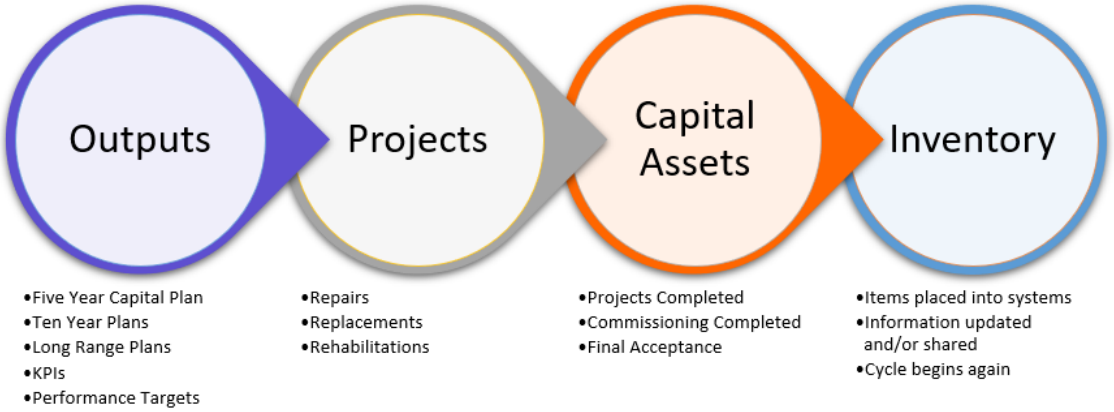


Figure 2- Asset Management Cycle Process

As the UTA TAM system evolves, improvements to the inventory can be made. Inspections will become more objective, and data produced by the remainder of the system will only get better as it matures.

UTA utilizes the TERM-Lite application for its long-term capital planning needs as it relates to SGR efforts. TERM-Lite is an FTA provided tool that can act as a decision support tool regarding funding allocation. One of the outputs from TERM-Lite is the SGR Backlog. The SGR Backlog not only refers to the dollar value of assets required to bring all assets into a state of good repair but also exists in its detailed form as a list

of assets out of a state of good repair. Using TERM-Lite also fulfills an FTA requirement to use a decision-support tool in the capital planning efforts. This will be further explained in the Part VI of this document.

To provide more reliable funding, more evenly distribute replacement efforts over the years, and provide more stability for UTA's project planning efforts, UTA has created several projects (buckets) that it uses to carry out its TAM efforts under. These projects include:

- FMA516- Corridor Fencing
- FMA543- Police Fleet Vehicles
- FMA652- Facilities, Equipment Managed Reserve
- FMA653- Facilities Rehab and Replacement
- FMA672- Park and Ride Rehab and Replacement
- FMA673- Stations and Platforms Rehab and Replacement
- FMA686- Warehouse Equipment Managed Reserve
- FMA692- Warm Springs / Commuter Rail Maintenances & Ops Facility
- ICI179- Network & Infrastructure Equipment
- ICI197- Bus Communications On-Board Technology
- ICI201- Server, Storage Infrastructure Equipment and Software
- ICI202- Radio Communication Infrastructure
- ICI217- Transit Management System
- ICI230- Operations Systems Enhancements and Replacement
- ICI230- HB433 Future Rail Car Purchase Payment
- MSP262- SLCentral HQ Office
- MSP270- Transit Signal Priority On Board Units (TOBU) Project
- MSP282- FrontRunner Platform Modification
- REV205- Non-Rev Service Vehicle Replacement
- REV209- Paratransit Replacements
- REV211- Bus Replacement
- REV232- Vanpool Van Replacements
- REV233- Commuter Rail Vehicle Replacement – Used
- REV234- Tooele County Microtransit & Vehicle Electrification
- REV236- VW Battery Buses
- REV238- SD100/SD160 Light Rail Vehicle Replacement
- REV241- NRV Ancillary Equipment (Trailers, etc.)
- REV242- Replacement Non-Rev Equipment/Special Vehicles
- SGR040- Light Rail Vehicle Rehab
- SGR047- Stray Current Mitigation
- SGR238- SD100/SD160- Light Rail Vehicle Replacement
- SGR353- Commuter Rail Engine Overhaul
- SGR359- Bridge Rehabilitation and Maintenance
- SGR370- Light Rail Red Signal Enforcement

- SGR385- Rail Rehab and Replacement
- SGR390- Jordan River Bldg 2 Remodel
- SGR391- Commuter Rail Vehicle Rehab and Replacement
- SGR393- Grade Crossings Rehab/Replacement
- SGR397- Traction Power Rehab and Replacement
- SGR398- OCS Rehab and Replacement
- SGR401- Ballast and Ties Rehab/Replacement
- SGR403- Train Control Rehab/Replacement
- SGR404- Rail Switches/Trackwork Controls
- SGR409- System Restrooms
- SGR410- Fiber Rehab and Replacement

There are also several smaller projects in UTA's IT group for critical infrastructure items.

Ten-Year Plans

To assist with SGR project management, the SGR team creates 10-Year Plans using the above project buckets for the following major asset types: infrastructure, facilities, revenue vehicles, and non-revenue vehicles. The plan assists the responsible service units by targeting the assets that may need to be rehabbed or replaced. Ten-Year Plans document assets that will exceed or have exceeded their useful life under the project bucket where they fall for rehab or replacement. Once an asset has exceeded its useful life, it will show up on the SGR backlog if it has not been replaced during the year in which it hits its useful life.

Ten-Year Plans are directly tied to the UTA 5-Year Capital Budget with estimates for years six – ten. The 10-Year plans provide asset lists of assets requiring rehab or replacements within a project bucket with detailed plans as to which assets are replaced by year for the ten-year period. Additionally, each project bucket has a target backlog percentage assigned to it. The target backlog percentage is the goal UTA will try to maintain during the 10-year plan, meaning the percentage of assets remaining in service that have exceeded their useful life but have not yet been rehabbed or replaced.

The Ten-Year Plan process is presented in Part VI with the 2025 – 2034 Ten-Year Plans for Infrastructure, Facilities, Revenue Vehicles, and Non-Revenue Vehicles available in Appendix I.

Goal

The goal of the Transit Asset Management efforts is to provide objective feedback to the FTA relating to the condition of UTA's assets and to base future asset planning on actual data gathered from the people who are most familiar with the assets. In turn, this feedback is captured, analyzed, and incorporated into the project planning efforts to get any issues addressed.

Part II- TAM and SGR Policy

See UTA Policy Number: 06.01 available in Appendix L

Part III- Capital Inventory List

UTA's SGR inventory will consist of items as defined by the FTA Final TAM Ruling. Items in the following categories and infrastructure will be defined by the SGR team. See Appendix A for an inventory hierarchy for these items.

This inventory will be based on the description outlined in the TAM Final Ruling which indicates an inventory must include all capital assets a provider owns, specifically all equipment, rolling stock, facilities, and infrastructure. The inventory does not need to include any equipment with acquisition values less than $50,000 unless that equipment is a service vehicle. The inventory must also include third-party owned or jointly procured exclusive-use maintenance facilities, passenger station facilities, administrative facilities, rolling stock and guideway infrastructure "***used by a provider in the provision of public transportation***." This inventory will be organized at a level commensurate with the level of detail in the provider's program of capital projects.

To maintain the inventory as described in the Rule, it will require assets be catalogued according to the inventory hierarchy. The inventory hierarchy can be adjusted over time, but to use the data input into the system, it must maintain the proper order so data can be used moving forward.

Key Inventory Information Elements

For information compiled into the asset management system, there are key items required to be registered. The most critical elements include: Description, Asset Number, Asset Code or Serial Number, Year Built (Date of Purchase), Unit Cost, Design Life, TERM Code.

To maintain an organized inventory, it is recommended assets be catalogued in a manner consistent with the inventory category hierarchy.

Asset Description

The Asset Description refers to the way an asset is known and tracked in UTA's asset master. There are varying levels of asset description (1, 2, 3) to further identify asset details. For equipment, it is recommended to use general description and a tag number to narrow down the specific asset.

Asset Code

The Asset Code is a very critical part of the inventory setup as it acts as the unique identifier for the asset. As the inventory grows to tens of thousands of assets, being able to understand to which specific asset the system points is critical to the long-term forecasting and replacement scheduling.

The Asset Code must be useful to the user. To accomplish this, each Asset Code must be unique and differentiate the asset without overcomplicating the structure. The system UTA chose to use is a "modular" structure where the Asset Code is built based on the inventory hierarchy structure and coupled with a piece of information separating that specific asset from others. This distinguishing information might be a vehicle number, a serial number or a milepost designation rounded to the nearest 100th of a mile.

Included on the hierarchy will be the abbreviation UTA will use to construct the asset code. Based on what the asset is, the inventory will be constructed using abbreviations from the hierarchy and the unique asset code designation.

Example of a Previous Asset Code:

CRS-GW-BT-TT-23.43-K (The asset is a piece of tangent (straight) track on the Commuter Rail South line at milepost 23.43)

- CRS = Commuter Rail South
- GW = Guideway
- BT = Ballasted Track
- TT = Tangent Track
- 23.43 = Milepost
- K= Drawing Set

As there are dozens of tangent track pieces on Commuter Rail South, the milepost designation makes the asset code unique. By inserting this, UTA can maintain an asset code structure applying to as many different assets as it needs. Adding the milepost number to a potential hundredth of a mile means this asset is unique as long as there is not another asset within a 50-foot radius of the asset. The K is a reference to the drawing set from which the inventory was built. It will apply in some cases like infrastructure inventory but beyond that, the main structure for the asset code will likely end with the unique identifier.

Asset Code Structure:

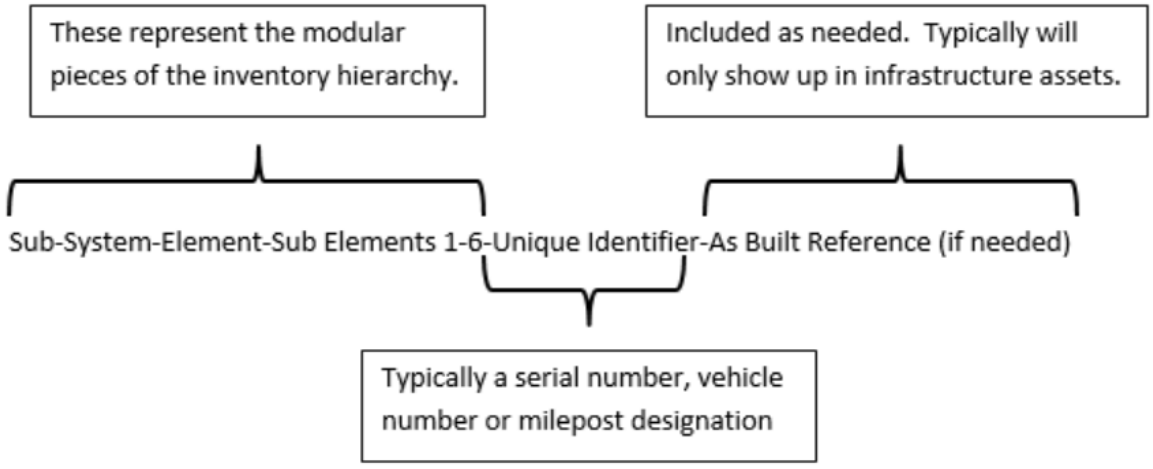

Figure 3- Asset Code Breakdown

Current asset codes will follow the following format. This new format will include the year built to help tell more of a story about the asset for the viewer. This will just be displayed with the year; it will not be displayed as an actual date. For example purposes, the asset code shown above would look like this under the new format:

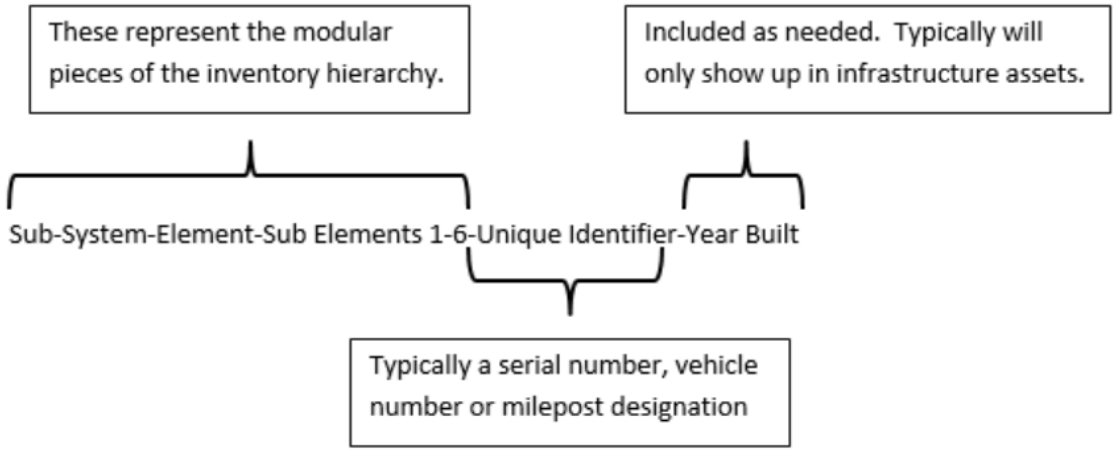

Figure 4- Asset Code Breakdown

Example of a Current Asset Code:

CRS-GW-BT-TT-23.43-2012 (The asset is a piece of tangent (straight) track on the Commuter Rail South line at milepost 23.43)

- CRS = Commuter Rail South
- GW = Guideway
- BT = Ballasted Track
- TT = Tangent Track
- 23.43 = Milepost
- 2012= Year the asset was built

Year Built

The Year Built category refers to when an asset was built, not when the asset was put into revenue service. Because the SGR Rule was published after the majority of UTA's rail infrastructure was added, in some cases the date an asset went into revenue service may be the best date. In the future, efforts can be made to work with contractors proactively to identify the date key assets are actually constructed and put into revenue service.

This element is critical since many assets involve an age-based condition rating system. To function in this system, UTA must be able to accurately determine the age of an asset. The Year Built date is extracted

from the Manufacture Date, for which the format is MM/DD/YYYY. The format for logging Year Built is YYYY.

Design Life

The design life refers to the expected life span (in years) of an asset when it is designed. In the context of the SGR Final Rule, the Design Life differs from a Useful Life Benchmark (ULB) in that a Design Life was the initial anticipation for how long an asset would last. A ULB is a more realistic life expectancy estimate, in years, attributed to an asset after UTA has had a chance to observe how the asset holds up under operational conditions over a few years.

UTA plans to use this ULB extensively in its long-term budget forecasting. ULB values are adjusted over time based on field evaluations or failure rates. To calculate replacement dates and create forecasts, the asset's age is deducted from the ULB value. That value represents how many years in the future UTA is currently planning on replacing a particular asset. See Appendix B for UTA useful life values for major assets.

This replacement planning is consistent regardless of the condition assessment approach. While some assets may only require tracking the age, those assets requiring actual condition inspections will also have a design life accurately reflecting the projected replacement year.

It should also be noted that there are some assets that UTA will likely not replace. These assets include items like major facilities or rail guideway assets like ballast and ties. Those items will rely instead on more increased capital maintenance funding to extend the life of those assets as long as possible until the only option is to replace them, if that ever comes.

Additional Inventory Categories

Table 1 lists all the inventory categories UTA uses to create its TAM inventory. It also contains a list of items UTA needs to track relative to the Continuing Control requirement needed for Grants Management. While not all Continuing Control categories are applicable to non-federally funded assets, UTA strives to capture as many of those categories as possible to capture as much data about an asset as possible. Not all fields are applicable to all asset types.

TAM Inventory Categories	Continuing Control Categories
Unit Number	Asset Description
TERM Code	Identification Number
Parent Asset Code	
Asset Code	Federal Award Identification Number (Grant Number / Name)
UTA Sub-System	Acquisition Date
Element	Cost
Asset Description 1	Percentage of Federal Participation
Asset Description 2	Responsible Service Unit
Asset Description 3	Location
Additional Remarks 1	Use and Condition

TAM Inventory Categories	Continuing Control Categories
Additional Remarks 2	Useful Life (Months)
Additional Remarks 3	Disposal Date
Milepost	Disposal Amount
Station Location (Begin)	Method Used to Determine Fair Market Value
Station Location (End)	Equipment Title Holder
Manufacture Date	
Quantity	
Quantity Unit	
Year Built	
Design Life	
Age	
Remaining Life (Calculated)	
TERM Condition Rating (Calculated)	
UTA Condition Rating (Observed)	
Unit Replacement Cost	
Replacement Cost	
Construction Drawing Reference	
X-Coordinate(s)	
Y Coordinate(s)	
Unit Cost Year	
Replacement Date	
Agency Project Category	
Agency Project Description	
In-Service Date	

Table 1- Inventory Elements

Part IV- Condition Assessments

Condition assessments relate directly to the performance measures required under the TAM Final Rule. The rule states this section of the TAM Plan is to be a condition assessment of those inventoried assets for which a provider has direct capital responsibility. A condition assessment must generate information with sufficient detail to monitor and predict the performance of the assets and to inform the investment prioritization.

Condition assessments for the facility assets are in Appendix M. They will be completed every four years and added to the plan in Appendix M upon completion. The rest of this section will describe how condition ratings and the methods will translate into the performance measures required by the FTA TAM Rule.

Performance measures are based on either age or condition combined with the performance of an asset. Based on the condition of its assets and the condition assessment method, Table 2 below outlines the categories on which UTA is required to report.

Asset Categories	Condition Assessment Method	Determining Factor
Revenue Service Vehicles	Age Based	Is vehicle older than its established ULB? Counted as a percentage per fleet of vehicles that exceed an established ULB.
Non-Revenue Service Vehicles	Age Based	Is vehicle older than its established ULB? Counted as a percentage per fleet of vehicles that exceed an established ULB.
Facilities (Administration, Maintenance, Passenger Stations, Parking Lots & Parking Structures)	Condition Based	Physical Inspection of these items.
Infrastructure	Performance Based	Relates to Rail Infrastructure. Calculated percentage of track segments with performance restrictions.

Table 2 - Condition Assessment Table

UTA will utilize the Ten-Year Plan to deliver the investment prioritization information. This plan allows stakeholders to provide information to the decision makers regarding risks that can be expected should the project not be funded. At UTA, the SGR Team has always believed in order to provide a benefit to the agency, a financial output is needed. This output needs to provide a brief but realistic portrayal of the risks decision makers need to weigh when they are allocating budgets. For the budget projections to be of value, it is critical that the highest level of decision makers believe and support the data provided. If there is a lack of trust and belief in the system outputs, asset management will become a box to check but the data will not add value or be used in making decisions.

Useful Life Benchmarks (ULBs)

A Useful Life Benchmark (ULB) refers to an expected life value for an asset. In the context of the Transit Asset Management Rule, it provides a benchmark indicating when an agency feels it should replace an asset. This should not be seen as a minimum value of the asset, rather it should be seen as a realistic value. In the most basic terms, assets with ages exceeding an established ULB value for that asset class would be considered out of a State of Good Repair, and conversely, in the agency's backlog.

The Capital Asset Controls team and Grants departments also use a similar term in their efforts as it relates to FTA circular material. In their world, ULB may refer to a minimum age value for an asset class for which an agency would not be required to repay the FTA should UTA choose to dispose of an asset early. In some instances, these values for Accounting and TAM may be identical. In other instances, they may vary. When setting the ULBs for assets, the SGR group should consult with the Capital Asset Controls team and Grants groups to ensure they are not setting a ULB conflicting with other governing documents. Conflicting ULB would be defined as a TAM ULB being set below that of what is defined in a grant agreement. It is ok to have a different useful life than what may have been in a grant vs what is identified

for TAM purposes, however, setting a TAM useful life below that which is existing in a grant agreement would present some issues and needs to be properly planned for when defining a capital project.

In a TAM context, agencies are allowed to shift the ULB if they so choose. Should UTA decide to do this, it will need to justify the reason behind the shift and be able to provide some level of confidence that the shift will not extend the ULB value beyond UTA's realistic expectations. This shift would be communicated in the NTD narrative document reported each year as part of the A90 form submission.

FTA Useful Life Benchmark Cheat Sheet

For vehicles, the FTA provides ULB values. The link is:

https://www.transit.dot.gov/sites/fta.dot.gov/files/2021-11/TAM-ULB-CheatSheet.pdf

Table 3 is a list summarizing the UTA vehicle fleet.

NTD Code	Vehicle Type	FTA Default ULB (in years)	UTA Value (Can be a Range)
AB	Articulated Bus	14	14
AO	Automobile	8	8
BU	Bus	14	12 - 18
CU	Cutaway Bus	10	8
LR	Light Rail Vehicle	31	25 - 30
MV	Minivan	8	6 – 8 *
RL	Commuter Rail Locomotive	39	40
RP	Commuter Rail Passenger Coach	39	40
SR	Streetcar	31	30
SV	Sport Utility Vehicle	8	8
VN	Van	8	6 – 8 *

***Excessive/accelerated mileage may drive earlier replacement**

Table 3 - ULB Table for Vehicles

TERM Scale

The TAM Rule requires agencies to use the 1-5 TERM scale. Below (Table 4) is a description of the rating:

Rating Value	Description	Useful Life Used
5.0	Excellent	0% - 10 %
4.0	Good	11% - 50%
3.0	Adequate	50
2.5	----	100%
2.0	Marginal	> 100%
1.0	Poor	> 100%

Table 4- TERM Condition Rating Definitions

The FTA requests condition ratings as integer values. UTA will use decimal points up to the hundredth place to provide greater granularity and perspective to the true condition rating of an asset.

According to the rule, an asset is in an SGR if its value is 3 or greater. Values are allowed to be rounded to the nearest whole value for reporting purposes. By extension – the absolute lowest condition rating an asset may be rated at and still be considered in an SGR is 2.50. Anything below that would be considered out of an SGR.

Revenue Service Vehicles

The high-level description for what generates the performance measure target value reported annually to the FTA for rolling stock is the percentage of revenue vehicles within a particular asset class having either met or exceeded their ULB. In other words, the measure is the percentage of vehicles within a particular asset class that are as old or older than the ULB against which they are measured. Figure 5 below provides an example of a light rail vehicle. It shows an age range and what a decay curve could look like.

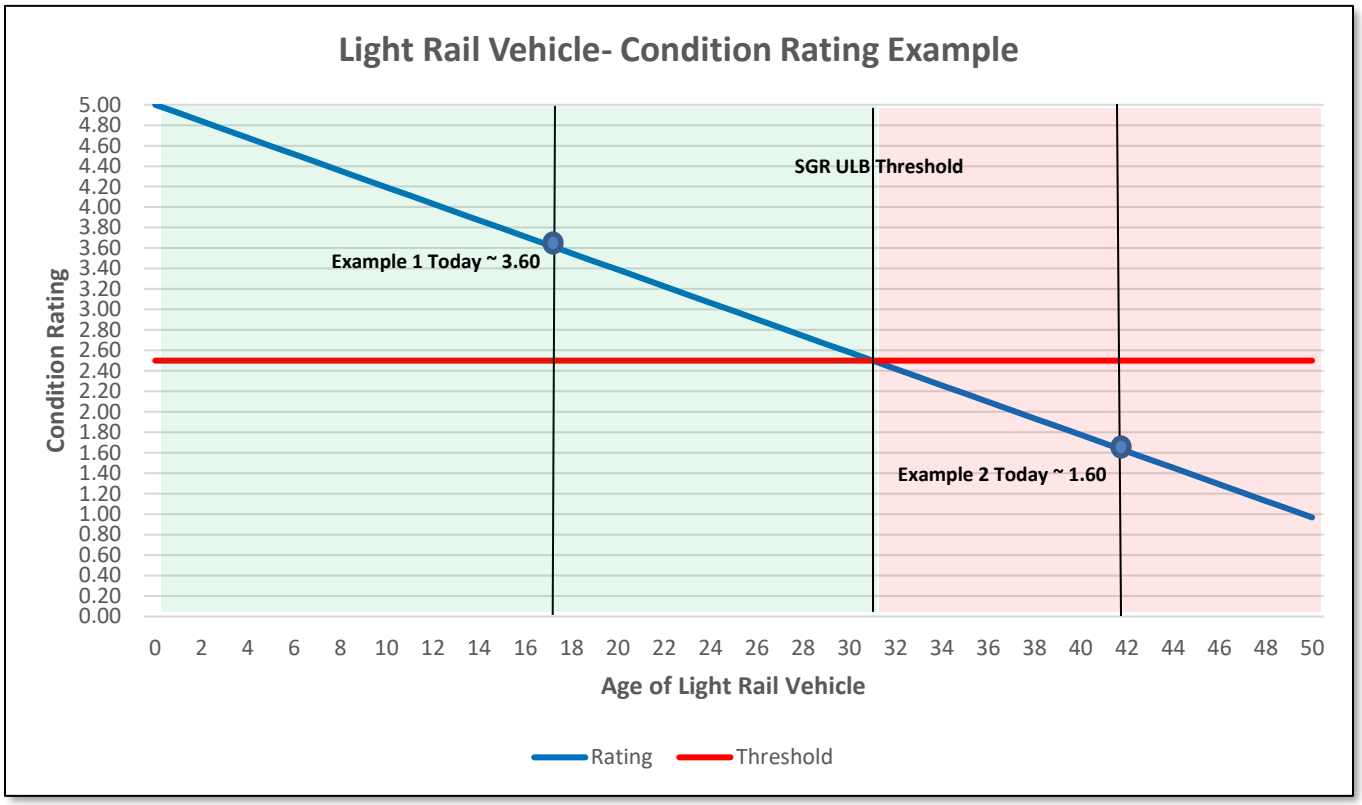

Figure 5- LRV Useful Life Example

The area in green reflects a period of time equal to the ULB for which an asset may be considered in an SGR. The area in red reflects the period of time for which an asset might be considered below an SGR. In this case, 31 years is the threshold level. In an age-based system, the asset, represented by the dot, tracks down the deterioration rating curve towards the ULB threshold. This timeframe is represented by the point where the blue and red lines intersect and where the green and red fields share a border.

According to Figure 5, because the asset in Example 1 is to the left of the ULB threshold and above the threshold, it would be counted as being in an SGR. In Example 2, because the asset is 42 years old and falls below the minimum threshold line, it would be considered out of a SGR and would be counted towards the percentage of assets in this asset class out of a SGR, or in the backlog.

This approach will be used for the calculation of performance measures for all revenue vehicle fleet types regardless of mode. A final list of performance measures exists in Appendix D and will be updated annually.

Non-Revenue Service Vehicles

The FTA Final TAM Rule also requires agencies provide feedback on non-revenue service vehicles, with all requirements pertaining to Revenue Service Vehicles applying as well. Vehicle fleets for this category would refer to the function of the vehicle.

These vehicles will be measured against an age-based condition rating scale based on the fleet/type of the vehicle. As is the case with Revenue Vehicles, UTA can modify the ULB of the vehicle type with justification. (Table 5)

NTD Code	Vehicle Type	FTA Default ULB (in years)	UTA Value (can be a range)
AO	Automobile	8	8
MV	Trucks & Other Rubber Tire Vehicles	14	14 - 20
N/A	Steel Wheel Vehicles	25	25 - 50

Table 5- NTD Category and Useful Life Values

Based on discussions with NTD Analysts, the Automobiles classification is meant to cover vehicles like sedans, two-door coupes, hatchbacks, or like vehicles. Vans, SUVs and trucks are meant to fall under the Trucks & Other Rubber Tire Vehicles classification.

Facilities

The items required by the FTA Final TAM Rule to undergo an actual physical condition assessment belong to the Facilities category. The Rule is specifically aimed at Administration and Maintenance buildings as well as Passenger Stations and Passenger Parking facilities.

The guidebook for facility condition assessments is provided in Appendix E. This document should be viewed as a help to produce the facility condition rating.

UTA facility condition assessments will be completed in-house by UTA employees every four years. These inspections will be housed on UTA's network with the overall observed condition rating being entered into JD Edwards.

Standardized facility assessments promote efficiency and consistency among the condition rating evaluations. The FTA allows agencies freedom to establish approaches for performing condition ratings. A sample of the forms being used is provided in Appendix J.

Condition assessments will allow UTA to plan its capital replacement budget for facilities based on these assessments.

The performance targets UTA will be reporting to the FTA regarding facility conditions are a percentage of a facility type that have an overall condition rating of 3 or less.

Infrastructure

The method required for reporting by the FTA relative to the calculation of the infrastructure performance measure is unique. Rather than considering actual rail condition as determined by rail geometry characteristics or some other physical observation, the performance measure is a calculation reflecting the number of slow orders in place and the effect those performance restrictions have on UTA's rail systems.

The calculation method will be based on the number of performance restrictions in place on the first Wednesday of each month at 9:00 am. Rail Operations Controllers supply the SGR group with a list of performance restrictions open at that time and the SGR group consolidates these restrictions into a single list. At the end of the year, the SGR team will calculate the overall value for the year reflecting the performance target for reporting to the FTA.

UTA has established Infrastructure Performance Targets for its different service lines. There are metrics in place for:

1) Commuter Rail
2) Red Line- Light Rail
3) Blue Line- Light Rail
4) Green Line- Light Rail
5) S-Line

To perform these calculations, the SGR team has broken up the alignment into sections called track segments. A track segment list is included in Appendix G. Light rail and streetcar track segments are from interlocking to interlocking. Commuter Rail is similar; however, a segment goes from station to station. The areas wrapping around a station are a segment and the area between the stations is a segment.

To generate the calculation, the total number of track miles being affected by the performance restrictions are tallied monthly and stored over the course of the year. At year end, those lengths will be averaged and a Year-to-Date measure determined.

In addition, the number of track segments affected by performance restrictions each month will be divided by the total number of track segments in UTA's system. At year end, this percentage will be averaged over the year and this value will be reported to the FTA.

Part V- Analytical Process for Estimating Needs over Time

General Approach

There are many tools available to UTA to aid in the estimation of capital needs over time for assets tracked under the TAM Rule. The performance measures outlined by the TAM Rule provide a starting point. These performance measures are determined by age, condition, and performance characteristics of UTA's assets.

Figure 6 illustrates the process assets should follow to develop these needs projections over time. Beneath the chart, there will be more in-depth explanations for asset categories dealing with specific performance measures required by the FTA.

All assets should be assigned a useful life value. In any effective asset management system, assets, regardless of the condition determination method, should have a baseline useful life value established. In UTA's system, the goal is for the condition rating of assets to deteriorate according to the useful life projection to which they are assigned. These condition ratings will be tied to the TERM 1-5 condition rating scale. As assets approach a value of 3, UTA will physically verify the actual condition of the asset. If UTA recognizes a pattern of premature failures, it may choose to update all the assets of a particular asset class.

At this point, UTA will determine whether the condition rating should be adjusted based on the physical condition at the time of verification. An adjustment in the condition rating also involves an adjustment to the useful life value for that asset. After the condition rating and useful life values have been adjusted, for the adjustment to be fully captured, the budget impacts should be addressed. If the adjustment modifies the SGR Five-Year Plan, adjustments should be made, and the proper individuals notified. For adjustments affecting budget numbers outside the SGR Five-Year Plan window, no action is required.

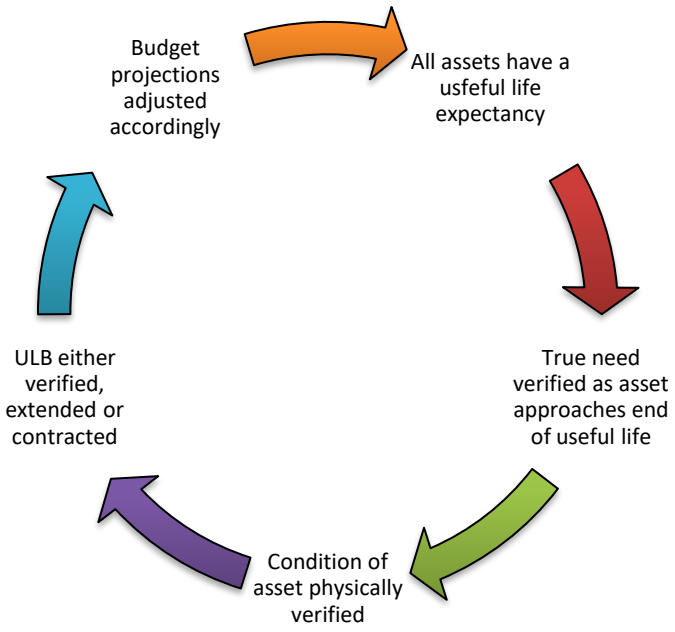

Figure 6- Condition Verification Approach

Data Consolidation

Figure 7 below outlines the data sources considered from the different asset categories and how they will be evaluated and processed into the SGR Five-Year Capital Plan:

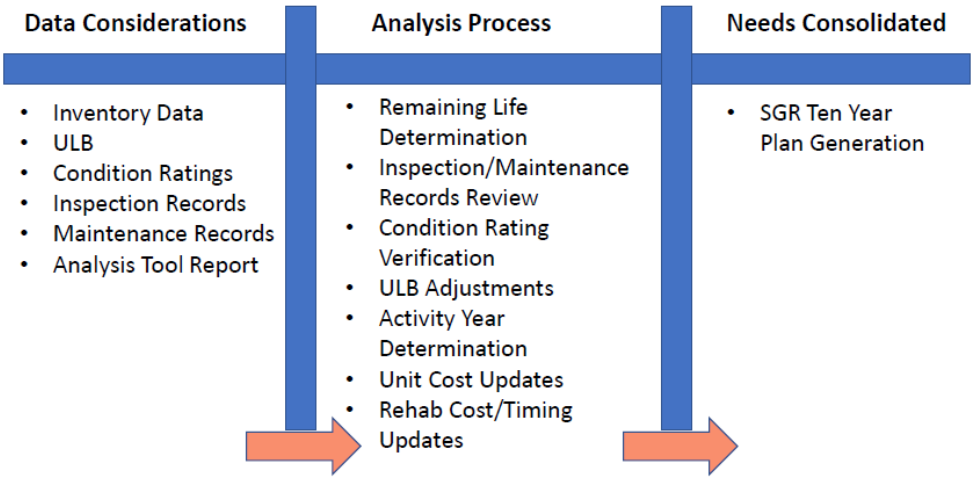

Figure 7- Asset Information Flow

Revenue Service Vehicles

The long-term maintenance of revenue vehicles involves designated overhaul intervals over the course of a vehicle's useful life and culminates in the replacement of the asset at the end of its useful life.

Since revenue vehicles are evaluated on a time-based schedule, determining the proper timing for these overhaul cycles can be more easily planned. These overhaul cycles can be more narrowly defined to specific projects. The intent of this section is to highlight which revenue vehicles are or should be included in a particular overhaul cycle.

Revenue vehicles and efforts programmed for their capital maintenance and replacement in the current 2024 SGR Five-Year Plan account for 68% of the forecasted need as seen in Figure 8. Fifteen percent of that figure is allocated to replacing and/or rehabbing rail vehicles. UTA's light rail fleet consists of SD100s, SD160s, and S70s acquired in 1999, 2001 / 2003, and 2011 / 2012 respectively. The light rail fleet overhaul projects are underway for the S70 vehicles with expenses allocated for the next several years. In addition, the SD1X0 light rail vehicle replacement project(s) are underway with expenses allocated for the next several years. A copy of the Five-Year Capital Plan for 2024 – 2028 can be referenced in Appendix O.

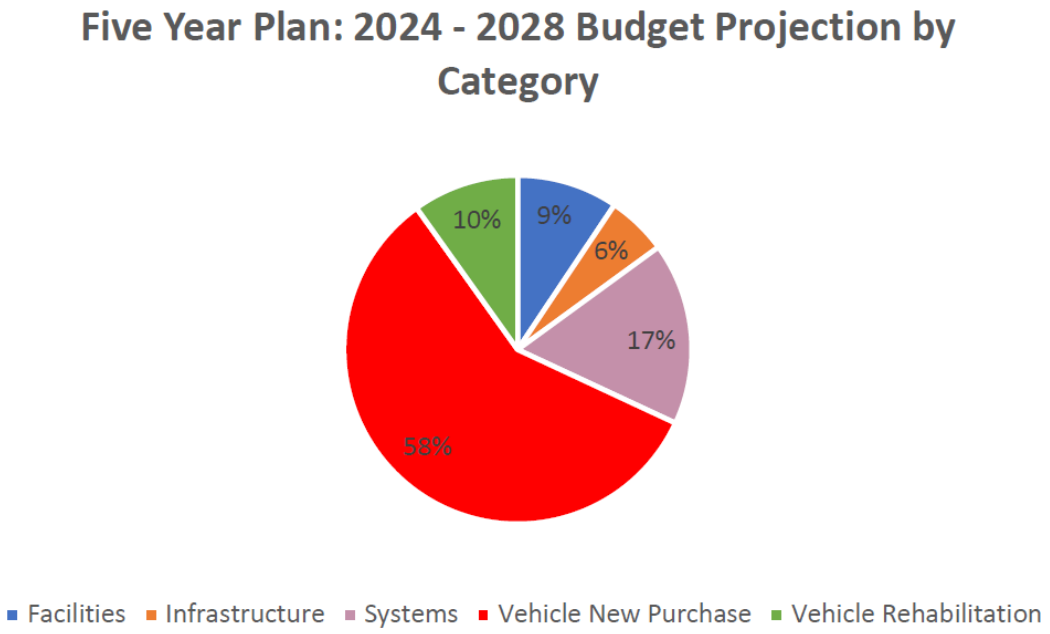

Figure 8- Current Five-Year Plan Budget Percentages

With the Bipartisan Infrastructure Law passed in 2021, UTA accessed and may have access to additional federal funds to replace rail vehicles. There is $300 million available every year for five years beginning in 2022 for SGR and rail vehicle replacement. See figure 9 for details.

Fiscal Year	2022 (in millions)	2023 (in millions)	2024 (in millions)	2025 (in millions)	2026 (in millions)
5337 State of Good Repair	$4,411	$4,483	$4,575	$4,649	$4,743
High Intensity Fixed Guideway Tier	$3,994	$4,064	$4,153	$4,225	$4,316
High Intensity Motorbus Tier	$117	$119	$122	$124	$127
Competitive Grants for Rail Vehicle Replacement	$300	$300	$300	$300	$300

Note: The Bipartisan Infrastructure Law provides both authorized future funding from the Mass Transit Account of the Highway Trust Fund and advance annual appropriations, both of which are included in the table shown above.

Figure 9 – Bipartisan Infrastructure Bill and SGR Funding for Rail Car Replacements

Vehicle Program Approach

Programming for vehicle overhauls and replacements needs to account for UTA's capacity to get the work done: either completed in-house or contracted out, its production rate per year and the length of time needed to complete the overhaul cycle for an entire fleet. Vehicle overhaul managers will have the flexibility they need to establish this programmatic approach. Since overhauls are now considered to be a part of the lifecycle activities of the major revenue vehicle classes, they will be ongoing, and to be consistent with the programmatic budget approach, overhauls can better be accounted for in the five-year plan. This approach utilizes lessons learned based on past experience and allows UTA to better target a consistent annual funding amount that can be supported by data and is more in line with UTA's capacity to perform the work.

Rail vehicle overhauls are completed via a component overhaul program. There are certain components associated with different overhaul phases. Major components can be rebuilt and warehoused until they are needed. When components designated for replacement as part of a particular overhaul schedule come due for replacement, they will be pulled off the vehicle and replaced with a recently rebuilt component. At that point, the pulled item should be evaluated and either disposed or refurbished. In the event the item is disposed, the Overhaul Manager will determine if a replacement component is required to maintain the appropriate component float. This approach will help minimize downtime for required capital maintenance efforts.

Vehicle replacement activities will be programmed by the Vehicle Overhaul Manager. The Vehicle Overhaul Manager will work with the SGR Manager to program the replacements of these vehicles and reflect them in the SGR Five-Year Plan. UTA will set its ULB to reflect the beginning of the cycle for which it anticipates the rail vehicle replacement.

Light Rail Vehicle Replacement Strategy

UTA is pursuing a discretionary grant opportunity for the replacement of the current SD100 & SD160 fleets over the next several years, approximately (2023-2028). TAM priorities were updated based on the NOFO requirements released 12 October 2022, after the first TAM Plan update was required per the TAM CFR regulation. The ULB for the SD fleet vehicles has been updated to 25 years from the initial value of 30 years. There are three major justifications for this ULB update:

1) Expensive Future Overhaul Efforts – the older SD100 vehicles currently use a DC propulsion system. As part of any rehab program for extending the useful life value of these vehicles, it would require a costly update to convert this system to a more reliable and better performing AC propulsion system, similar to what is currently in use on the SD160 vehicles. In addition to this activity, other costly efforts will need to be performed to extend the useful life of these vehicles out for an additional 10 years. The estimated cost for these life-extending overhaul activities is above $100 million in the aggregate.

2) Accessibility – SD100 and SD160 vehicles require high-block boarding for ADA patrons. These high-block platforms add extra effort these riders need to perform to board the vehicles. This also requires operators to exit their cabin and lower a manual loading ramp so the rider can board the vehicle. This adds dwell-time at each station and provides an extra burden to these riders and UTA's operators. By providing a low-floor vehicle to replace these existing high-floor vehicles, UTA will provide level boarding options for all its patrons across the entire light rail system. This will provide additional rider accessibility benefits to UTA patrons, improve operational efficiencies, and provide consistency in how UTA's riders can access the Light Rail system.

3) Finally, Salt Lake City won the 2034 Winter Olympic Games bid. Replacing the SD fleet will ensure LRVs are reliable while providing enhanced accessibility in time for those Olympics.

The project prioritization for the LRV Replacement Project can be seen in the SGR Project Prioritization Matrix (Appendix N). Further rehabbing the SD fleet would provide a 10-year life extension with an estimated $100 M cost as compared to being able to purchase newer vehicles for $120M. UTA anticipates being able to get 2.5 to 3 times the life out of the new vehicles that it would expect to realize by spending twice the amount of money for the vehicle replacement as opposed to funding the life-extending overhaul project.

Non-Revenue Service Vehicles

Non-Revenue Service Vehicles performance measure is also age-based. For these vehicles, UTA should follow recommended maintenance guidelines for maintaining these vehicles, however, in most cases there will not be an overhaul effort for the vehicles.

The main capital effort relating to these vehicles will be vehicle replacement according to their ULB. Mileage accumulation will also be considered.

Some vehicles falling into this category could garner capital maintenance rehabilitation funding. These vehicles are generally related to the specialty vehicles like rail infrastructure maintenance equipment.

These assets typically have a longer useful life and are very expensive. As with revenue vehicles and to be consistent with the programmatic budget approach, rehabilitation can better be accounted for in the ten-year plan as an Annual Capital Maintenance (ACM) value.

Table 6 is a table of UTA's different Non-Revenue Service Vehicle types. This table also outlines if UTA anticipates significant ACM funding should be provided for these vehicles to meet the ULB. The Police Vehicle Replacement project will be discussed more fully later in this section.

Vehicle Type	Project Code	Capital Funding SGR Buckets
Non-Revenue Vehicles	REV205	Replacements
Specialty Vehicles	REV242	ACM/Replacements
Ancillary Equipment/Vehicles	REV241	Replacements
Police Vehicle Replacement	FMA543	Replacements

Table 6 – Non-Revenue Vehicle Capital Activity Chart

UTA has centralized all non-revenue vehicle responsibilities into one team, except for the Police vehicles, and adopted a centralized fleet management approach. This approach allows UTA not only consolidate non-revenue vehicle lifecycle responsibilities into one group, but to apply procedures correcting practices that might have increased the use of vehicles well past their useful life values. In addition, this approach has the following benefits, including many SGR activities such as vehicle maintenance schedules and replacement cycles:

- Total Cost of Ownership (TCO) Model:

  The TCO Model is utilized in conjunction with vehicle age and mileage guidelines to determine the optimal strategy for managing non-revenue vehicles. This includes decisions on downsizing, reassigning, or replacing vehicles.

- Vehicle Utilization and Pool Structure:

  Non-specialized non-revenue vehicles with lower utilization rates are transitioned to a vehicle pool structure. A minimum Vehicle Miles Traveled (VMT) threshold and a baseline of operations for each department have been defined to justify vehicle assignment versus inclusion in the pool.

- Fleet Replacement Cycle:

  A Fleet Replacement Cycle has been established based on age and mileage guidelines for vehicles.

- Ongoing Review and Coordination:

  Continuous review of departmental needs, vehicle utilization, and planned replacements is conducted in coordination with department managers to ensure alignment with operational requirements.

Replacements for non-revenue vehicles will continue following an evaluation process where multiple characteristics of the vehicle are considered relative to age, usage, etc. to determine where the greatest

need lies. If the vehicle still appears to be in good condition, the condition rating value will be adjusted to more accurately reflect the true condition of the vehicle and provide a more accurate replacement date projection. If the vehicle is deemed to need a replacement, the capital funding will be requested. Vehicle managers may use other tools they develop to help determine the priority of the replacements.

Police Vehicles

UTA operates its own Police Department. Due to the high usage and high mileage accumulation these vehicles endure, they are managed using a different ULB and mileage range. The Police Department manages their fleet. They receive capital funding on an annual basis to replace a certain number of their vehicles. Due to the high usage of the vehicles, their ULB range is more frequent than other non-revenue service vehicles at UTA. Their ULB range can be as low as every 5 years and would typically range from 5 – 8 years depending on performance and mileage accumulation.

Police vehicles are also a great candidate for the 5307 safety and security funding requirement. This requirement states UTA is to spend 1% of the funding it receives for the 5307 formula funds on safety and security projects. These vehicle replacements typically meet that requirement

Facilities

Overview

Facilities are the only asset class where the condition rating determination method is based solely on a physical inspection. The FTA requires condition rating inspections for maintenance, administration, passenger station and passenger parking facility assets minimally once every four years. Qualified Facilities Journeyist personnel having an adequate understanding of facility elements being inspected should conduct these condition inspections.

To maintain process integrity, SGR staff will annually audit 10% of submitted condition inspections and verify the supplied condition ratings. SGR staff will document their findings and return the previously submitted condition rating inspection report with their comments to the Facilities Manager to address comments and modify applicable condition ratings. Updates and condition ratings will be maintained in JD Edwards.

Condition Rating Table

Table 7 outlines the FTA TERM Condition Rating Scale and the description of the rating value to be used in the condition rating table.

Rating	Condition	Description
5	Excellent	No visible defects, new or near new condition, may still be under warranty if applicable
4	Good	Good condition, but no longer new, may be slightly defective or

Rating	Condition	Description
		deteriorated, but is overall functional
3	Adequate	Moderately deteriorated or defective; but has not exceeded useful life
2	Marginal	Defective or deteriorated in need of replacement; exceeded useful life
1	Poor	Critically damaged or in need of immediate repair; well past useful life

Table 7 - Condition Rating Descriptions

Quadrennial Condition Assessments

Currently, UTA has 268 facilities it believes qualify for these condition assessments. These assets are summarized in the Table 8:

FACILITIES	Number
Beck Yard	1
Bus Rapid Transit Station	71
Central	6
Commuter Rail Station	17
Depot District	6
Frontline Headquarters	1
Jordan River Service Center	3
Light Rail Station	60
Meadowbrook	12
Midvale	4
Mobility Center	1
Ogden	6
Park and Ride	47
Parking Structure	3
Police Station	3
Riverside	6
Roadhouse	1
Semi Service	1
SLC Intermodal Hub	4
Timpanogos	11
Tooele Bus Garage	1
Warm Springs (UP Diesel Shop)	1
7200 S Building	1
Provo CS	1

Grand Total	268

Table 8 - Facilities Condition Assessment Count

Inspection Points of Focus

Below (Figure 10) is an example form that UTA is currently using for its facilities condition inspections:

Date: **Inspected By:**

Campus: **Facility Name:**

Unit #: **Overall Average Condition** **2.93**

ID	Category	Sub-Category	Condition 1	2	3	4	5	Percentage Sum	Weighted Score	Average Condition
	Section 1: Applies to Admin/Maintenance Buildings Only

89		Air Compressors, Sump Pumps, & Ejectors							0.00	0.00

Figure 10- Facilities Condition Assessment Example

The calculation works as follows:

1) The weighted score is a value that reflects the percentage of the item in a particular condition state. This condition score is equivalent to the TERM Scale. The percentage, expressed as a whole number on a scale from 1-100, is multiplied by the corresponding condition score.
2) The Average Condition for the individual elements is calculated by multiplying the weighted score by .01 and then multiplying that by 5.

3) The overall average condition score at the bottom of the page is than calculated by taking the average of all the elemental Average Condition scores.

Facility Planning

Future facilities SGR projects will be coordinated between the Facilities Manager, Manager SGR, and Facilities Development Supervisor. Additionally, UTA's Facilities Development group purchased and is installing/configuring a product from AECOM's Asset Management Division to use as a facility master planning tool. The majority of major facilities SGR work will be included in UTA's Strategic Facilities Master Plan.

Equipment Assets

The TAM effort focuses on equipment assets used in the provision of public transportation with a cost greater than $50,000. This includes all non-revenue vehicles regardless of cost. Non-Revenue vehicles are addressed in a separate section. This section refers to the other equipment assets.

Equipment assets typically include assets such as shop equipment. Due to the nature of the prioritization models, these items typically score low on the priority list, mostly due to the fact they are not customer facing. UTA, however, recognizes that these assets are important to the UTA operation so it allocates a block of funding dedicated to the rehab and replacement of these assets where the responsible project manager can use this dedicated funding to replace or rehabilitate as many assets as possible with that available funding.

To aid in the decision-making process as to what assets will be replaced, the SGR team provide the project manager with an updated list each year of the assets that are due for replacement.

Guideway

Overview

Calculating the needs for the Guideway Infrastructure will revolve around useful life values for infrastructure elements, geometry readings, maintenance records, and ride quality analysis. Each element will be considered individually and as a collective total.

Useful Life Values

UTA established useful life values for different infrastructure elements relating to rail corridor track, signaling systems, and electrification systems. Similar to the useful life method described earlier, as assets approach the condition rating of 3 in a time-based condition rating system, UTA will physically inspect the asset in question to determine the need. If the need is warranted, the condition rating will be validated, and the need will be documented. If the need is not warranted, the useful life will be extended, and the process repeated when the asset again approaches the condition rating of 3.

The SGR team will compile a report each year to identify which assets are approaching their projected replacement dates. This report will provide the basis for programming and verification efforts for that year.

There are some components, particularly electrical components and signaling components that can be inspected but may not show signs of imminent failure. There may be instances where UTA elects to extend a useful life value on those components. This should be done after sufficient due diligence occurs.

The SGR Team will group the assets deemed eligible for replacement or rehabilitation into projects and submission for budget consideration.

Geometry Records

UTA hires a third-party contractor periodically to fulfill its required FRA geometry tests. The SGR team will consult with the MOW Track group regarding those findings to track occurrences over time. These geometry tests tell UTA if the track is in a sufficient enough condition to operate the trains at the designed class speed.

After issues are reviewed and the correct fix determined, managers will decide whether the fix can be addressed through a routine maintenance practice or a capital project. If a capital project is required, the SGR team will work with the appropriate managers to develop and include it in the SGR Five-Year Plan.

Ride Quality Analysis

UTA has made purchases which will help in the gathering of track geometry data and in maximizing the tamper productivity. UTA has also acquired an accelerometer system on its locomotives as an added benefit of a recently installed health monitoring system, enhanced track tamping equipment, and a linear asset analytical tool to help monitor, maintain, and improve ride quality for its rail infrastructure. UTA purchased a separate accelerometer system that can be transferred between rail vehicles and can calculate the ride quality compared against the ISO ride quality standard.

The ride quality analysis will happen in a two-pronged approach:

Tamper Practices

UTA converted a hi-rail vehicle to a modified track geometry vehicle and upgraded the control system on its rail tamper. The tamper system can accept geometry data from the hi-rail vehicle and determine its tamping program based on that pre-run data. With the tamper equipment upgrade, UTA can gather geometry data more frequently and also maximize the tamper productivity. This will not include all the geometry data the 3rd party vendor gathers but it should provide enough data to assess the geometric condition is of its rail infrastructure.

In addition to being a benefit of the tamper system upgrade, UTA will be able to gather geometry data almost on demand at an increased frequency which expands UTA's ability to determine the effectiveness of its maintenance efforts in a particular area over time.

Accelerometer Efforts

UTA is also experimenting with accelerometer data to determine ride quality. The idea is to use these systems to ride the lines, determine locations with ride quality issues, and compare runs over time classifying ride quality issues as persistent or resolved through UTA's maintenance efforts.

These accelerometer readings are measured against established ride quality thresholds used by the FRA as well as ISO ride quality index standards (such as an ISO 2436) to determine problem areas. With problem identification, the tamper can be used to pinpoint the issue and develop a plan to smooth out the area. After the tamper finishes, UTA can conduct a ride quality run verifying problem mitigation. UTA's Maintenance of Way service unit uses the accelerometer at least twice per year.

Part VI - TAM Plan Implementation Strategy

To implement a strategy, there must be a defined outcome or goal the agency hopes to obtain through its coordinated efforts. The defined goal is an accurate budget projection for the SGR Five-Year Capital Plan.

For this to be effective, participants need to be identified, the consolidation point identified, the vetting process outlined, and the prioritization process established. Other key success requirements include finalized budgets as well as project managers who deliver their projects in accordance with their associated 10-year plan documents.

SGR Ten-Year Plan Generation Process

The SGR team takes budget numbers provided by Accounting to create the constrained TERM-Lite runs. Output from this system is used to update the SGR backlog and create Ten-Year plans for infrastructure, facilities, vehicles, and non-revenue vehicles. Once complete, these Ten-Year plans are then used as a source for the Five-Year capital plans, with specific projects addressing SGR needs designated as SGR projects.

The first step to creating the Ten-Year Plan is updating ULB and unit cost values for all assets. Every year, no later than September 15th, the SGR team will send out notifications to all managers responsible for asset replacements reminding them that they must review ULB and unit costs for all their assets. As a second step, no later than November 1st, the SGR team will coordinate reviews and updates to the asset rehabilitation variables. These variables drive rehab cost and timing and are the following: 1) cost – the percentage of the replacement cost required to rehab an asset, 2) quantity – the number of times an asset will be rehabbed before it is replaced, and 3) timing – the percentage of the useful life used at which point the asset is rehabbed. After these updates are complete, the values are updated in JDE and SGR staff runs a TERM Lite run with no budgetary constraints to create an updated SGR backlog. After the initial unconstrained model is complete, SGR staff acquires UTA budget numbers to include in the constrained TERM Lite run.

Output from the constrained TERM Lite run is separated into infrastructure, facilities, revenue, and non-revenue vehicle buckets. For each bucket, the assets are separated into asset types (i.e., grade crossings,

interlockings, curved rail, etc.) and scheduled across Ten-Years by condition rating with the poorest condition assets being replaced first. Assets are listed specifically with location and asset number to aid in asset disposal and replacement asset creation. SGR staff distributes the different Ten-Year plans to the affected groups as well as copies to the Director of Capital Programming & Support, Chief Financial Officer, Chief Capital Services Officer, and the Director of Safety & Security.

UTA's current best practice for implementing SGR projects is to maintain two years of scoped SGR projects. While it might not be advisable to attempt adding a project in less than the two-year standard, emergent issues may require additional SGR projects or reprioritization of upcoming projects.

The Infrastructure ten-year plans for 2025 – 2034 are in Appendix I, followed by the Facilities, Vehicles, and Non-Revenue ten-year plans (also 2025 – 2034).

Elements of an SGR Project

Definition of SGR

UTA has a definition of SGR that it has used for several years. With the publishing of the 2016 Final Rule, the FTA established a definition for SGR. These definitions overlap and are basically the same at the core of the principles.

UTA Definition: An asset is able to operate as intended without limitation or restriction.

FTA Definition: An asset is able to operate at a full level of performance.

To generate a project for inclusion in the overall SGR Five-Year Plan generation, the following elements must be present.

1) The project needs to be a repair, replacement, rehabilitation, or enhancement of an **EXISTING** asset.
    a. Main asset categories are rail infrastructure, revenue vehicles, non-revenue vehicles, facilities, and equipment with a unit cost greater than or equal to $50,000.
        i. Facility categories include the following types:
            1. Administrative Buildings
            2. Maintenance Buildings
            3. Passenger Stations
            4. Passenger Park & Rides
            5. Passenger Parking Structures
        ii. Non-Revenue Service Vehicles include:
            1. Self-propelled vehicles
            2. Specialty maintenance vehicles
            3. Ancillary non-revenue equipment/vehicles such as trailers

2) Project submissions must include sufficient information for readers to have a basic understanding of project goals.
3) Project submissions must also have an associated budget number. If projects are multi-year, the appropriate budget amount for the appropriate year should be given.

If the three criteria cannot be determined from the submission, the submission will be sent back and project proposers can choose to: edit their submission to address the criteria, pursue funding through other funding buckets, or pursue the item another year.

Project Prioritization Process

It should be noted that for SGR funding consideration, a project will compete against other projects designated as SGR projects. Projects not going through the SGR prioritization process will be eligible to compete for capital funds however they will not be able to compete for SGR funds.

After the SGR project list is created, the SGR Manager will meet with the Director of Safety & Security to review UTA's hazard log in an effort to ensure unacceptable safety risks are considered. The deadline for this meeting is January 15th of each year. The output from this meeting will be a list of safety risks, the SGR project to which the risk would be assigned for mediation, and an indicator proving the specific asset is contained in the appropriate 10-Year Plan.

The SGR manager will then ensure the SGR team meets and prioritizes the projects according to the following criteria. In this meeting, the SGR group will assign an initial risk score to the projects being considered and supply the scores to the voting members during the meeting. Each of the criteria below will be rated on a scale of 1-5 (1 being the lowest and 5 the highest) except for criteria five (length of time in backlog). The higher the score, the greater the risk value assigned to the project. Criteria five will be different because it will not be on a one to five scale. The value of this criteria will be equivalent to the number of years the asset is in excess of its established ULB value. This value will help to draw attention to projects that might linger in the backlog.

1) Public safety
    a. 1- No improvement
    b. 2- Minimal improvement
    c. 3- Marginal improvement
    d. 4- Moderate improvement
    e. 5- Significant improvement
2) Operational Schedule/Performance
    a. 1- No improvement
    b. 2- Minimal improvement
    c. 3- Marginal improvement
    d. 4- Moderate improvement
    e. 5- Significant improvement
3) Quality of Life
    a. 1- No improvement

b. 2- Minimal improvement
c. 3- Marginal improvement
d. 4- Moderate improvement
e. 5- Significant improvement

4) Customer Experience
    a. 1- No improvement
    b. 2- Minimal improvement
    c. 3- Marginal improvement
    d. 4- Moderate improvement
    e. 5- Significant improvement
5) Length of time in backlog
    a. The number of years an asset is beyond its useful life
    b. Contained in 10-Year Plans by asset type

These scores will be added to the project matrix and summed together to generate an overall risk score for the project. The SGR Team will then sort the list in order of greatest risk value.

Following the project prioritization, the prioritized list will be submitted to the Director of Capital Programming & Support, the Director of Design & Construction, the Director of Safety & Security, and the Chief Capital Services Officer. This must occur by March 1st with final list produced no later than March 15th based on feedback. The Directors and Chief can then review the prioritization process and make modifications as they see fit. This represents the completion of the SGR project list prioritization and the SGR Five-Year Plan generation. This prioritization effort will be used as an input to the overall project prioritization for the upcoming Five-Year Capital Plan.

This annual process should be completed in advance of capital request submissions. After that, the typical five-year budget process will occur to develop the upcoming Five-Year Capital Plan. That plan will then be submitted to the Executive Team for final selection. This involves ranking the new capital projects according to a prioritization method they determine for that meeting and then making recommendations on which projects to complete based on the available budget for the following year.

Part VII - Key TAM Activities over Upcoming Horizon Period (2025-2029)

Key TAM Activities UTA needs to complete over the upcoming horizon period to be compliant with the TAM Rule can be broken into the following activities:

1) Performance Target Setting
    a. This will be an annual activity relative to the four prescribed performance measures from the Final Rule.
    b. These Performance Targets will be funneled to the appropriate MPOs for their purposes via UTA's Planning Office.
2) NTD Reporting

a. UTA will participate in the annual NTD reporting exercises, including the optional reporting times.
b. Reporting details the progress UTA made over the course of the year tracking towards their previously set performance targets.

3) Five-Year Plan Completion
    a. This is prepared annually for the following five years.
    b. Prioritization should be completed by March 1st.
    c. Five-Year Plan development period between April and August.
    d. Formal Board of Trustees approvals in late quarter 3 / quarter 4.
    e. This should be completed by December 15th.
4) Facilities Condition Inspections
    a. These need to be completed at a pace of 25% per year.

Part VIII- Resources Needed to Carry Out TAM Plan

To carry out the elements of this TAM Plan, UTA needs-the following elements:

Necessary Personnel

1) Board of Trustees Chair
    a. Approval of TAM Policy
2) Executive Director- Accountable Executive
    a. Will approve the TAM Plan and be able to direct resources in a manner consistent with priorities through the asset management process.
    b. Approves annual performance targets.
    c. Approve group plan.
3) Chief Capital Services Officer
    a. Ensures process is fair and equitable and either presents plans to the Accountable Executive or is available to provide additional commentary for reasoning behind plan.
4) Director – Capital Programming & Support
    a. Conveys plan direction to UTA Executives and Regional General Managers, and
    b. Encourages their service unit's participation in SGR Five-Year Plan Generation.
    c. Facilitates data collection methods for departments needing to supply required information relative to condition and performance targets.
5) Director of Safety & Security
    a. Ensures safety risks are identified and considered in SGR projects.
6) Director of Capital Design & Construction
    a. Responsible for most SGR project execution and delivery.
7) Manager - SGR
    a. Develops and implements UTA's Asset Management Program.
    b. Coordinates plan information with UTA Management.
    c. Team responsible for collecting all relevant data needed for generating appropriate KPIs and reporting information.

d. Creates and updates UTA's TAM Plan.
e. Manages the creation and update of the SGR Ten-Year Plan.

8) Maintenance Departments/Responsible Service Units
    a. SGR Team will need access to their maintenance records and preferably any KPIs they may already be producing relative to asset condition, replacement activity, and cost history.
9) Facilities Maintenance Manager
    a. Helps facilitate the required Facility Condition Assessments out of their department.
10) Rail Operations Controllers
    a. Provide monthly performance restriction data to the SGR team.
11) Procurement
    a. It is much easier to get required inventory data from contractors and vendors when assets are purchased. Procurement will help to ensure certain inventory information is written into the contract as part of the final deliverables on capital assets. As a best practice, it may be wise for Procurement to reach out to all departments and see if there is other information that UTA should be gathering as part of its capital asset purchasing processes.
12) Accounting/Capital Asset Controls Personnel
    a. Role will be to inform the SGR team when assets over $50,000 are received.
    b. Also need to inform the SGR team when assets with a purchase cost over $50,000 are disposed.
    c. Responsible to ensure capital items are inventoried consistent with established procedures.

Necessary Systems

The following are computer systems currently at UTA that are necessary to carrying out the TAM Plan:

1) JD Edwards
2) GIS (ESRI)
3) TERM-Lite

Part IX- TAM Plan Monitoring, Updating & Evaluation

General Overview

The TAM Plan is meant to be a living document that evolves and changes over time as UTA's asset portfolio changes. The TAM Plan requires an update every four years consistent with the TAM Plan horizon period. UTA will update and recertify its plan every two years.

To monitor and update its TAM plan, UTA will need to track its progress against what has been identified in the SGR Five-Year Plan and monitor its annual NTD reporting data. This will be done by the following process:

1) Initial generation of the SGR Five-Year Plan in October of the preceding year.

2) Funding is allocated for the identified projects - typically beginning of following year.
3) Assets not replaced are maintained in the Backlog list of the appropriate Ten-Year Plan.
4) Projects are monitored for completion in accordance with Ten-Year Plan asset lists.
5) SGR Five-Year Plan is regenerated and updated for the next five-year horizon period with current and future needs data as well as identifying the backlog need.
    a. The backlog need will be tracked and updated every year so that the SGR team can monitor the management of UTA's backlog amount.
6) Every year, the SGR team will meet with the Director of Programming & Support to review and/or create the following:
    a. SGR Timeline / Project Plan creation
    b. SGR Backlog Comparison from prior years
    c. Is this SGR Five-Year Plan meeting the long-term needs of maintaining UTA's assets in an SGR?
    d. Does the TAM Plan provide sufficient direction to meet UTA's goals for its SGR program?
        i. If not, the plan will be updated with the recommended changes and recertified.
        ii. If so, the plan will be recertified with a new date and version to maintain correct version history.

Recertification Process

Every two years, the SGR team reviews the TAM Plan, Performance Target Submissions and SGR Five-Year Plan to identify potential modifications or recommend to the Chief Capital Services Officer, or appropriate designee, that the TAM Plan in its current form be submitted to the Accountable Executive and Board of Trustees for review and approval.

If updates to the TAM Plan are required, the SGR Manager will coordinate updates to the plan. The resubmission will be done in a timely fashion. The updated plan will be submitted to the Director of Programming & Support who, when satisfied with the revisions, will recommend to the Chief Capital Services Officer that the TAM Plan be reviewed and considered for approval by the Accountable Executive and Board of Trustees.

Part X: Conclusion

In summary, UTA is committed to maintaining its assets in an SGR. It believes adherence to this plan is in its best interest and in the best interest of its stakeholders and the taxpayers. UTA also understands that for this effort to be successful, it will involve input from all organizational levels as well as a robust and coordinated effort to ensure long term rehabilitation and replacement activities occur over time.

Appendix C- FTA Useful Life Benchmark Cheatsheet

FTA
FEDERAL TRANSIT ADMINISTRATION

Default Useful Life Benchmark (ULB) Cheat Sheet

Sources: NTD Reporting Manual

Transit Agencies must report the age of all vehicles to the National Transit Database. FTA tracks the performance of revenue vehicles (Rolling Stock) and non-revenue service vehicles (Equipment), by asset class, by calculating the percentage of vehicles that have met or exceeded the useful life benchmark (ULB).

FTA has set a default ULB as the expected service years for each vehicle class in the table below. ULB is the average number of years at which a vehicle would reach a 2.5 rating on the FTA Transit Economic Requirements Model (TERM) scale, assuming a standard maintenance schedule. When entering fleet data in the NTD, Transit Agencies have the option to either use the pre-populated default ULB or submit an adjusted ULB based on differences in operating environment and/or agency maintenance practices. In cases where the submitted ULB differs significantly from the default value, agencies may be prompted to submit justification.

Vehicle Type		Default ULB (in years)
AB	Articulated bus	14
AG	Automated guideway vehicle	31
AO	Automobile	8
BR	Over-the-road bus	14
BU	Bus	14
CC	Cable car	112
CU	Cutaway bus	10

Appendix D- UTA Current Performance Target Document

Utah Transit Authority

2023 Performance Target Summary

2024 Performance Target Goals

Author: Transit Asset Administrator
Date: 4/22/2024

Introduction

The following pages contain summary views of the 2023 Performance Target Calculations. The FTA Transit Asset Management Rule requires agencies to report on these performance targets. Performance targets provide insight into the overall condition level of assets. The FTA defined these categories and published them in 2017. UTA patterned the summary page after the A90 form so that reporting is consistent and streamlined.

The SGR group would like to include these targets in the Transit Asset Management Plan on an annual basis. It will be included in the form of the following pages which displays the different performance measures requested on the new NTD A90 form. This document contains the A-90 Narrative required by the NTD. The narrative contains the summary data on the last page which has the agency target, the agency's performance percentage, the percentage difference between the target and actual and the following year's target.

The remaining documents include the backup data the summary figures are based on. Vehicles are based on an age-based calculation. Facilities are reported on physical inspection results. Infrastructure is based on performance restrictions. The SGR team has divided up the rail infrastructure into segments. Segments on Light Rail typically span from interlocking to interlocking or crossover to crossover. On commuter rail, they typically span from control point to control point (essentially station to station). If a performance restriction is in effect on the first Wednesday of the month at 9:00 am, it is counted in the overall calculation. The segment or segments to which it is assigned have pre-calculated lengths that are used to determine the overall affected length due to the performance restriction. This is reported as an overall percentage of track segments with a performance restriction over the year. An average length for the year is calculated as well. This was the approach described in the calculation guidebook. This does not appear to be required in the NTD however, UTA will produce this calculation in case it is requested.

Utah Transit Authority, NTD ID 80001
669 West 200 South
Salt Lake City, UT 84101

Prepared by Bryce James, Transit Asset Administrator for Reporting Year 2023

Useful Life Benchmark – Revenue Vehicles

High-Level Summary:

UTA has a fleet of 492 Motorbuses, 39 OTR Buses, 25 Articulated Buses, 148 Cutaway Buses, 117 Light Rail Vehicles, 18 Locomotives, 38 passenger coaches and 508 Vanpool Vans.

Performance Targets:

- Zero percent (0%) of AB - Articulated Buses exceeding their useful life benchmark of 14 years (FTA defined)
- Less than (0%) of BR - Over the road buses exceeding their useful life benchmark of 14 years (FTA defined)
- Less than (10%) of BU - Buses exceeding their useful life benchmark of 14 years (FTA defined)
- Zero percent (0%) of CU - Cutaway Buses exceeding their useful life benchmark of 10 years (FTA defined)
- Zero Percent (0%) of LR - Light Rail Vehicles exceeding their useful life benchmark of 31 years (FTA defined)
- Less than (20%) of MV - Mini Vans exceeding their useful life benchmark of 8 years (FTA defined)
- Zero Percent (0%) of RL - Commuter Rail Locomotives exceeding their useful life benchmark of 39 years (FTA defined)
- Less than (0%) of RP - Commuter Rail Passenger Coaches exceeding their useful life benchmark of 39 years (FTA defined)
- Less than (20%) of VN - Vans exceeding their useful life benchmark of 8 years (FTA defined)

How did UTA calculate these targets?

The targets were set using a calculation of the age values in the respective modes and incorporating feedback for physical condition assessments which may have taken place beyond the age calculation.

How has UTA made progress toward its targets?

UTA replaces buses and other revenue vehicles annually. Through the TERM Lite modeling runs, UTA forms their 5-year and 10-year Capital plans which helps forecast upcoming fleet purchases in the foreseeable future. In addition, UTA uses the 20- and 30-year projection capabilities of the TERM lite model to model future replacement strategies based on vehicle types to understand the potential funding implications of those decisions.

These forecasts allow UTA to plan for any major upcoming fleet purchases to maintain the desired performance targets.

What challenges face UTA in making progress toward the targets?

UTA continued to dispose many retired revenue vehicles with its updated disposal process. Additionally, UTA disposed many buses to mitigate spare ratio issues. Similar to other agencies, UTA has had to take some significant action to align its bus fleet numbers with spare ratio requirements in a post-pandemic environment. Additionally, some Vanpool vehicles were kept longer than expected in 2023 to accommodate additional ski service.

Over the last two years, likely due to effects of the pandemic, UTA has had significant issues with the delivery of its cutaway fleets. UTA will continue to find ways to procure these vehicles.

The only revenue vehicles being planned for replacement in 2024 are cutaways, vans, and minivans. UTA did receive 10 diesel buses in early 2024, but they were late arrivals from the 2023 delivery.

Useful Life Benchmark – Non-Revenue Vehicles

High-Level Summary:

Useful Life Benchmark – Non-Revenue Vehicles
UTA owns 34 service automobiles, 6 steel wheel vehicles, and 674 trucks or other rubber tire vehicles.

Performance Targets:

- Less than 20% of non-revenue vehicles exceeding their useful life benchmarks of: 8 years automobile, 14 years trucks & other rubber tire vehicles, and 25 years steel wheel vehicles, all FTA defined

How did UTA calculate these targets?

The targets were set using a calculation of the age values in the respective modes and incorporating feedback for physical condition assessments which may have taken place beyond the age calculation.

How has UTA made progress toward its targets?

UTA prioritizes the rehabilitation and replacement of vehicles providing transit service. This could potentially result in a higher percentage of non-revenue service vehicles exceeding their ULB. Most of the backlog in this category is due to vehicles acquired as part of UTA's 2015 Rail expansion program. UTA intends to continue using these vehicles until they are disposed. As these vehicles reach the end of their lifespan, UTA will balance the replacement of essential service vehicles with available funding.

Part of the UTA's improved utilization plan is standardizing the fleet so staff can swap vehicles, thus leveling mileage. This will prevent UTA from having older vehicles with lower mileage while also having newer vehicles with excessive mileage (e.g., 20-year-old vehicles with 70K miles versus 4-year-old vehicles with 350K miles). UTA makes an effort to assign vehicles based on job requirements to best fit the needs of individual work groups in an attempt to use the most efficient vehicle for each job function. All UTA vehicles are equipped with Geotab devices to monitor location and usage, which has increased the non-revenue team's ability to not only track mileage but also push more service units into using the newly established service vehicle pools.

UTA has made significant strides in 2023 to provide more adequate resources to its NRV fleet including the development of a Fleet Management Action Plan to help govern the management of these vehicles. In addition, UTA has dramatically increased the amount of funding going towards its NRV fleet in 2024 going from a little over $1.1 M in 2023 to over $6.7 M in 2024 and going from $3.65 M in its previous 5-year plan to over $20 million in its current 5-year plan. In addition, UTA increased its staffing levels to better meet the overall agency needs causing an increased need in vehicles to service staff increases.

What challenges face UTA in making progress toward the targets?

UTA continued disposing many retired service vehicles and have adopted a more proactive approach to disposing these in a timelier manner. Additionally, UTA is implementing its support fleet management plan better utilizing all non-revenue vehicles, including the creation of support fleet pools for each location as an effort to reduce the total number of support vehicles required. This should allow UTA to ensure each vehicle is being utilized to its fullest while still giving all business units access to the support vehicles they require. UTA has recently begun acquiring new support vehicles, which should allow additional disposals of older vehicles.

Useful Life Benchmark Adjustment Request

UTA would like to request an update on its Useful Life Benchmark for Trucks and Other Rubber Tire Vehicles from 14 years to 12 years. Staff are finding that this advanced replacement cycle is contributing to an overall lower reliability of the vehicle fleets and increased maintenance costs. By modernizing the fleet over the next few years, UTA expects to see an increase in the reliability and overall utilization of the non-revenue fleet vehicles.

Facilities – Condition

High-Level Summary:

UTA currently utilizes the following facility assets:

- Four major bus operation campuses comprising of dozens of buildings
- Two Light Rail Operation/Maintenance Campuses with Yard
- One Demand Response Operation/Maintenance Campus
- One Commuter Rail Operation/Maintenance Campus with Yard
- 59 Light Rail Stations
- 16 Commuter Rail Stations (17 if the station to which service was discontinued were to be counted)
- 71 BRT stations
- 83 Park and Ride/Parking locations
- Various Administrative Satellite Locations

Performance Targets:

- Less than 5% of Passenger Facilities under 3 on TERM scale
- Less than 5% of Passenger Parking Facilities under 3 on TERM scale
- Less than 5% of Maintenance Facilities under 3 on TERM scale
- Less than 5% of Administrative Facilities under 3 on TERM scale

How did UTA calculate these targets?

UTA picked the target knowing that the condition assessment efforts have shown the majority of our facilities are above rating 3 on TERM Scale. UTA has been able to reduce these targets due to the last couple years of evaluation and condition assessments on these facilities. UTA uses data derived from condition assessments to produce a target specific plan to preform maintenance and repairs on facilities assets that will enable UTA to maintain or improve our ratings.

How has UTA made progress toward its targets?

UTA inspects all facility assets requiring condition assessments on a 4-year rotation. These physical condition assessments allow UTA to continue to have a more calculated approach to facilities performance targets and maintenance plans. Additionally, detailed facilities component condition data supplements project budget data, thus enabling facilities managers to better prioritize maintenance and rehab work as well as maintain the SGR for each facility. Due to the assessment ratings, UTA expects to be able to maintain its target for 2024.

UTA currently has four Facility Assets falling below a 3 on the TERM scale since implementing the asset management program. Two of the assets are either being scheduled for demolition in 2024 or are currently under construction for capital projects with major rehab tasks. The other two assets are minimal risk: one is a parking area, and the other is a station that was damaged by a private passenger vehicle. UTA does not anticipate any of its Building Facilities to drop below a 3 next year.

In addition, UTA recently completed construction on a new bus maintenance campus that replaced its oldest bus campus. This new maintenance campus officially opened in June 2023.

What challenges face UTA in making progress toward the targets?

The major challenge with Facility assets is funding. Due to the risk/prioritization process, facilities tend to be pushed to the bottom of the funding list. While this is generally the case nationwide, UTA is no exception. UTA continues using the budget "buckets" established during 2020 that help target the major facility asset needs more systematically and programmatically.

Additionally, in 2023, UTA stood up an internal group called the Facility Development Group that has been tasked with developing actionable Facility related strategic projects for UTA's facility assets and their long term usage and replacement planning.

Infrastructure – Performance Restrictions

High-Level Summary:

UTA has 122.86 miles of commuter rail infrastructure and 112.83 of light rail infrastructure including yard and siding tracks.

Performance Targets:

- Less than 5% CR – Commuter Rail exceeding their useful life benchmark.
- Less than 10% LR – Light Rail exceeding their useful life benchmark.

- Less than 10% SR – Streetcar Rail exceeding their useful life benchmark if it is applicable. If it is not applicable, it will be reported under Light Rail.

How did UTA calculate these targets?

These targets were picked based on the performance restrictions reported on the alignments for 2023.

UTA has divided its track into segments. A segment typically goes from an interlocking or control point location to the next. When a performance restriction is noted, that location or track segment is identified and counted as a value of one (1) and summed for the month. In the final calculation, the total number of segments are averaged over the course of the year to generate the average track segments affected by a performance restriction.

How has UTA made progress toward its targets?

UTA has had a couple years where major rehabilitation projects have been performed. As a result of this, UTA expects its performance restrictions to remain low. The PTC system that had been installed received certification from the FRA in 2020. This implementation of PTC has not created an increase in speed restrictions thus far. UTA sees this as moving in the right direction to keep progress toward lower targets relative to speed restrictions. I

During 2023, UTA replaced ten (10) grade crossing panel sets on its light rail system. The University Line S-Curve project replaced one (1) lengthy up- and down-hill embedded curve track section with one (1) direct fixation curve track section.

UTA Capital and Maintenance of Way staff continue to collaborate on what each other is seeing in terms of data and field observations and continually work together to refine their replacement plans for the next 10 years.

What challenges face UTA in making progress toward the targets?

The commuter and light rail systems are still relatively new, so the infrastructure is still in relatively good repair. However, due to UTA's location in a mountainous area, sometimes erosion or other issues can damage tracks or other equipment along the right-of-way, resulting in speed restrictions. Targets over the year may see an increase to cover these extenuating circumstances, although staff expect the physical infrastructure to perform with very high reliability due to its relatively new condition. UTA does not face any major challenges in making progress toward this target and are on track to meet it next year.

Following is a snapshot of the 2023 A-90 Performance Measures and new 2024 Performance Targets:

Performance Measure	2023 Target (%)	2023 Performance (%)	2023 Difference	2024 Target (%)
AB - Articulated Bus	0.00	0.00	0.00	0.00
AO - Automobile

The table above is calculated in a way consistent with the FTA Guidebook for calculating performance restrictions for an agency's infrastructure. This data is not required to be included on the A90 NTD reporting form that we can see. However, it is calculated and retained if it is requested. The intent of this table is to capture open performance restrictions on an agency's fixed guideway. The information above tells a reader that while UTA may have had occasional performance restrictions, they were able to remedy those restrictions in a reasonable amount of time. To be included on the list for consideration, a performance restriction must be in effect the first Wednesday of each month at 9:00 am. The units for these values are Direction Route Miles (DRM).

Appendix I- Ten-Year Plans

UTAH TRANSIT AUTHORITY

MOW 10-YEAR REPLACEMENT PLAN

Years 2025 -2034

Introduction

The Maintenance of Way (MOW) 10-Year Plan is developed to target the assets that may need to be rehabbed or replaced. This plan will show the assets that have exceeded their useful life. Once an asset has exceeded its useful life it will show up on the state of good repair (SGR) backlog. In this document, these assets are identified by their asset number or general description. The asset number is the identifying number that is used in UTA's inventory management system (JDE). The items that have a general description will not call out specific assets but will act as a placeholder for assets later identified.

At the beginning of each project there are labels connecting the project to the UTA 5-Year Capital Budget. The project code and project name are the identifiers that the MOW 10-Year Replacement plan uses to reference UTA's 5-Year Capital Plan. The target backlog percentage is the goal UTA will try to maintain during the 10-year plan; this means the percentage of assets remaining that have exceeded their useful life but have not yet been rehabbed or replaced. The total assets line represents the total amount of assets for that category or individual assets within that category.

To create a better understanding for the individual projects and their focus a high level overview will be given below for all proposed projects.

Grade Crossing Rehab/Replacement - Grade crossings are the place where a railroad and a road cross at the same level. This project will cover the grade crossing panels replacement only. The grade crossing panels are the set of panels or area that allows crossing vehicular traffic to travel over the UTA rail corridors.

Rail Rehab/Replacement - This project will take place in two types of territories on the rail alignment: embedded and ballasted. Embedded track, sometimes called street running areas, both supports the rail and automobile traffic. Ballasted track is on railroad ballast (rocks) that serves as a bed for railroad tracks to provide stability, drainage, and support for the significant loads that rail vehicles carry.

This Rail Rehab project also covers the replacement of crossovers which are a pair of switches connecting two parallel rail tracks, allowing a train on one track to cross over to the other. Three types of curved track will also be evaluated for replacement: embedded, ballasted, and direction fixation. The embedded and ballasted track have already been defined above. Direct fixation uses concrete pedestals to support the track leaving the rail fully exposed.

Rail Switches/Trackwork Controls - This project covers rail switches, which are a mechanical installation enabling railway trains to be guided from one track to another. UTA will address replacing three types of switches on the right of way and in the rail yards: hand throw, derail, and powered. Hand throw swithces have two parts linked together: the throw bar which extends to the lever on the near side of the track, which is activated using human strength to move from one position to the other. Derails are switches that direct errant rolling trains away from the mainline. Powered switches perform the same function as hand throw except that an electric motor is used to move the switch. This can be thrown remotely through our TDX software or physically at the switch by an authorized person.

Train Control Rehab/Replace - The train control systems are the hardware and software equipment that monitor the train locations and movements in order to ensure safety. During the MOW 10-year plan years, the gate mechanisms for grade crossings will be replaced. The gate mechanisms are the mechanical components

that help to raise and lower the automatic gates that are intended to keep vehicles and people from entering the grade crossing.

Traction Power Rehab/Replacement - Traction power substations (TPSS) are electrical substations that convert electric power from the form provided by the electric utility service to an appropriate voltage, current type, and frequency to supply UTA's light rail vehicles. TPSS will only have rehabs completed during this timeframe consisting of upgrading components and replacing any worn out parts.

Ballast and Ties Rehab/Replacement - Track ballast forms the trackbed upon which railroad ties are laid. It is packed between, below, and around the ties. It is used to bear the load from the railroad ties, to facilitate drainage of water, and keep down vegetation that might interfere with track structure. UTA's choice of ballast product is gravel or rocks. If the trackbed becomes uneven it will be necessary to pack ballast underneath sunken ties to level the track again. This is usually done by using a ballast tamping machine. The railroad tie is a rectangular support for the rail in railroad tracks. Ties transfer the loads to the track ballast, hold the rails upright, and keep the rails spaced to the correct gauge. The types of railroad ties that UTA currently uses are wood and concrete ties.

Rail Communication Fiber Rehab/Replace - Fiber-Optic communication is the method of transmitting information from one place to another by sending pulses of infrared light through fiber optic cable. Fiber is used throughout both Commuter and Light rail systems at UTA for railway signal controls, passenger information signs, and other communication devices.

Overhead Catenary System (OCS) Rehab/Replacement - The overhead catenary system acts as the contact line technique for transmission of electrical power. The substations supply the overhead catenary system which uses an electrical cable to transmit electrical energy to the light rail vehicles for their power and propulsion system.

Bridge Rehabilitation/Maintenance - Bridge inspection will be the catalyst for these projects. The inspections will help to identify small defects or potential problem areas in the bridges to help mitigate any major developing issues. UTA currently uses a third party vendor who completes these bridge inspections.

Condition Studies - The condition studies that UTA will perform are geometry car, OCS wire scans, fiber testing, and grade crossing baseline study. Geometry car testing will be used to test several parameters of the track geometry and rail profile. OCS wire scans will provide the current wear on the contact wire to help show potential weak spots on the alignment. Fiber testing will be used to measure the overall optic loss, measure performance, and prevent any avoidable issues. The grade crossing baseline study will cover the study of the AFTAC system and the train detection timing required for proper grade crossing safety. The frequency of these tests will help to create a baseline for how each respective areas assets are wearing and show trending as time passes. While OCS wire scans and fiber testing are performed under the OCS and Fiber projects, the geometry car and grade crossing baseline studies are conducted under this project.

This plan will provide an outline for specific assets that Project Managers can package into their projects. This plan is intended to be an outline in the sense that changes may need to be made by business units and as time progresses. Quantities and costs have the potential to change over time especially in a 10-year period. Periodically a review of this document will be required to evaluate its effectiveness.

General Description

This is a high level overview of the budget for the 10-year MOW maintenance plan per individual projects. Each project shows the money that has been budgeted for individual years during the 10-Year plan. The sum of the individual projects budgeted money is shown in the total line. The budget numbers for the years 2025 - 2028 were derived from the UTA 5-Year Capital Plan. The budget numbers for years 2029 - 2034 were gathered using the 2024 TERM Lite projection numbers from the constrained raw data file.

The charts on this page represent the projects that will have SGR backlog over the course of the 10 years. The charts represent the efforts that will need to take place in order to hit a certain backlog target percentage. Not all projects will have a chart due to no SGR backlog within that project. Some projects will have multiple charts due to different asset types within that project having SGR backlog. Information on each project will be given in greater detail per individual tabs in the Excel work book or shown individually in PDF form.

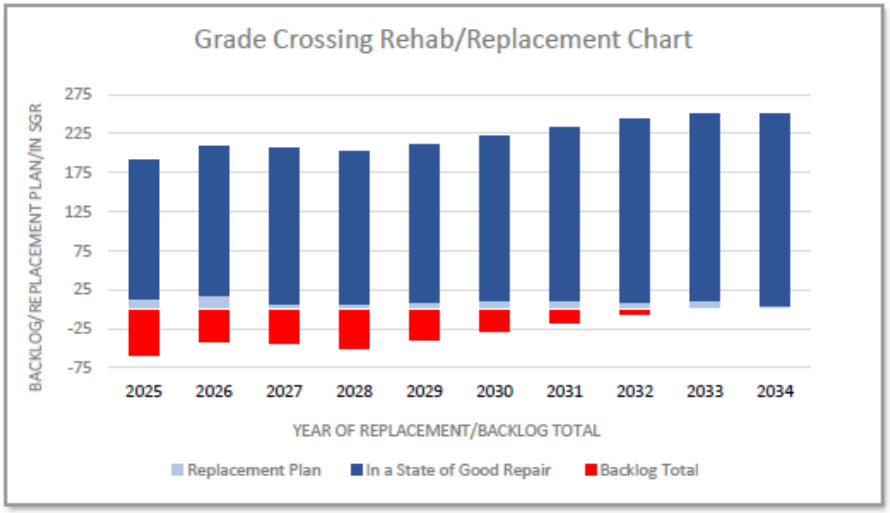
Total Budget	**$31,900,000**

General Project Description:

This project will cover the replacement of light rail and commuter rail grade crossing panel sets. The grade crossing panels are the set of panels or area that allows crossing vehicular traffic to travel over the UTA rail corridors. The majority of these panels will need to be replaced on the light rail right-of-way. The commuter rail will have 31 grade crossing panels reach their useful life in the year 2029. These commuter rail panels will start replacements in the year 2027 in order to spread the associated costs, with bulk being replaced during years 2027 - 2028. The light rail grade crossings will be listed with name of the grade crossing, each crossing consisting of 2 panels. In year 2025 there are 72 panels on the light rail line that will exceed their useful life. In order to reduce the light rail backlog, the first 2 years will consist of only replacing light rail panels. To maintain a 10% backlog by the end of the 10 year plan, UTA will need to replace/rehab at minimum 8 grade crossing panels per year.



UTA MOW 10-YEAR REPLACEMENT PLAN

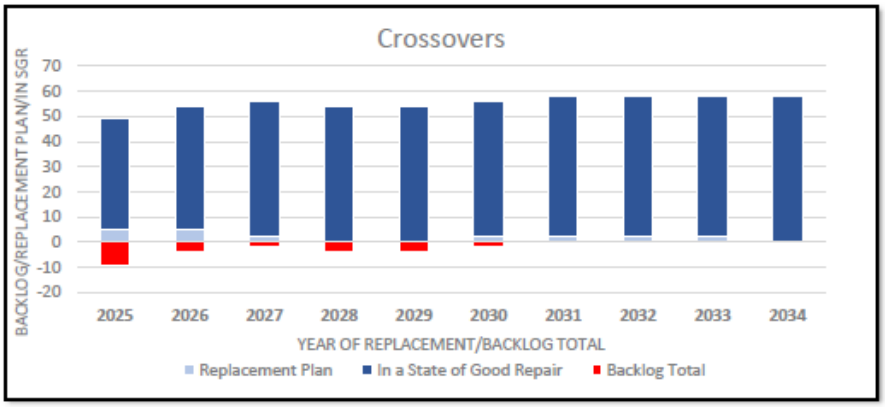
Project Code	SGR385
Project Name	Rail Rehab and Replacement
Projected 10 Year Budget:	
2025	$6,200,000.00
2026	$2,435,000.00
2027	$4,500,000.00
2028	$3,987,000.00
2029	$1,400,000.00
2030	$800,000.00
2031	$900,000.00
2032	$6,000,000.00
2033	$900,000.00
2034	$900,000.00
Total Budget	**$28,022,000.00**

Target Backlog %	10%
Total Crossovers (EA)	58
Direct Fixation (LF)	9,839
Ballasted Curve (LF)	600,337
Embedded Curve (LF)	49,076

General Project Description:

This project will cover the replacement of crossovers in both embedded and ballasted track areas on the light rail and commuter rail right-of-way. During the 10 year time period, two embedded diamond crossovers, two ballasted diamond crossover, thirteen ballasted single crossover, and four embedded single crossovers will reach their useful life. The 450 crossovers and Fieldhouse crossovers are currently not powered. During the replacements of crossovers that are not powered, UTA will need to evaluate options of creating powered crossovers in these locations. The replacement plan for the 10 years will show the amount of replacements planned for that year.

This project will also cover the replacement of three types of curved tracks: direction fixation, ballasted, and embedded. The amount will be based on linear feet from curves in the SGR backlog. Due to the radius of these curves, some of them may not require replacement upon inspection. As data is collected from inspections and analyzed, UTA could possibly extend the useful life on some of these curve track assets to mirror deterioration of tangent track pieces and update to 40 year useful life. For each type of curve, the replacement amount (in linear feet) per year is based on specific curves that are needing to be replaced. The appendix will call out the year, line, curve number, and linear feet.



UTA MOW 10-YEAR REPLACEMENT PLAN

Project Code	SGR404	**Target Backlog %**	10%
Project Name	Rail Switches/Trackwork Controls	**Total Assets**	399

Projected 10 Year Budget:

2025	$500,000.00
2026	$4,500,000.00
2027	$1,600,000.00
2028	$1,400,000.00
2029	$800,000.00
2030	$800,000.00
2031	$800,000.00
2032	$800,000.00
2033	$800,000.00
2034	$800,000.00
Total Budget	**$12,800,000.00**

General Project Description:

This project will cover the replacement of switches on the light rail right-of-way and switches in our rail yards. The switch types that will need replacement are derails, hand throw, and powered switches. One item that will need to be considered while replacing powered switches is adding the replacement or rehab of the switch heaters. The first two years of this 10-year replacement plan is when the switches will reach their useful life. To maintain a target of 10% backlog total for all switches, an average of 9 switches will need to be replaced each year.

This project will also cover yard switches requiring replacement. Beginning in the year 2028, five yard switches will be added to the assets to rehab/replace. Years 2025 - 2028 switch replacements are based on rail replacement projects during those years

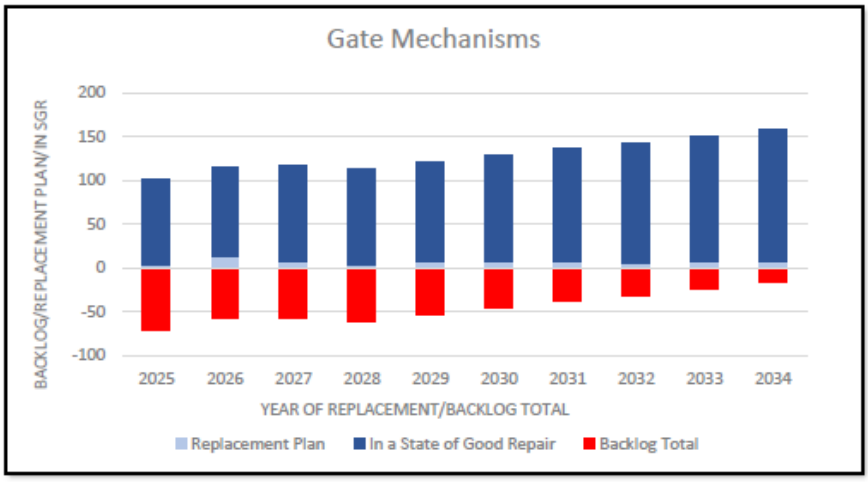
Total Budget	**$43,067,000.00**		

General Project Description:

This project will cover the replacement of gate mechanisms, flashers, and grade crossing indicators (GCI) at light rail grade crossings. This will consist of a complete change to gate mechanisms, not preventative or reactive maintenance occuring at these crossings as parts fail. Other components that are part of the grade crossing A19 such as grade crossing indicators and flashers will be replaced as the parts fail or lights burn out. To maintain a 10% backlog by the end of the 10-year plan UTA will need to replace at least 8 gate mechanisms, flashers, and GCI per year. Starting year 2025 some gate mechanisms will be changed the same year as corresponding grade crossing panels on the North/South light rail line to create efficiency.

In the years 2028 - 2032 there will be 19 signal head poles that will be on the SGR backlog. The replacement cycle for these will start in 2028 at an average of 2 a year with the exception of 2031 with 4 being replaced.During the replacement of interlockings, supporting system budget has been added to the totals. Zone work that will be completed has been added to the budget total as well.



UTA MOW 10-YEAR REPLACEMENT PLAN

Project Code	SGR397		
Project Name	Traction Power Rehab/Replacement	**Total Substations**	50

Projected 10 Year Budget:

2025	$4,300,000.00
2026	$0.00
2027	$0.00
2028	$0.00
2029	$15,000,000.00
2030	$15,000,000.00
2031	$15,000,000.00
2032	$15,000,000.00
2033	$0.00
2034	$0.00
Total Budget	**$64,300,000.00**

General Project Description:

This project will cover the rehab of substations on light rail right of way. Two substations were rehabbed in 2022, with the remaining rehabs taking place during the years 2023, 2024, and the first quarter of 2025.

The other budgeted money through the remainder of the years will be for capital maintenance activities or emergency fixes as required.

From years 2028 to 2032, the mid-life rehabs may occur for the substations that came online during the years 2011 to 2013 but were part of the 2015 program.

Assets to replace/rehab:

2025	2026	2027	2028	2029
$4,300,000.00	$0.00	$0.00	$0.00	$15,000,000.00

2031	$600,000.00		
2032	$600,000.00		
2033	$600,000.00		
2034	$600,000.00		
Total Budget	**$4,500,000.00**		

General Project Description:

This project will cover the replacement of wood and concrete ties on all UTA rail right-of-ways. Currently there is no backlog that will be present during the 10-year MOW maintenance plan. To maintain a balance and spread costs over time it has been proposed to replace 2.5 miles of ties per year.

$300,000 per year of this budget will be used for replacing the ties on the Garfield line. The Garfield line ties will use this project code until a project bucket for the Garfield line has been created.

Assets to replace/rehab:

2024	2025	2026	2027	2028
$300,000.00	$300,000.00	$300,000.00	$300,000.00	$300,000.00

2.5 Miles of Ties	2.5 Miles of Ties	2.5 Miles of Ties	2.5 Miles of Ties	2.5 Miles of Ties

UTA MOW 10-YEAR REPLACEMENT PLAN

Project Code	SGR410	**Target Backlog %**	0%
Project Name	Fiber Rehab/Replace	**Total Fiber - LF**	1,055,914.00

Projected 10 Year Budget:

2025	$1,519,000.00
2026	$679,000.00
2027	$682,000.00
2028	$686,000.00
2029	$0.00
2030	$0.00
2031	$0.00
2032	$0.00
2033	$0.00
2034	$0.00
Total Budget	**$3,566,000.00**

General Project Description:

This project will cover the replacement of fiber runs on the light rail right-of-way. Since these runs must be completed in full segments, the cost will occur in the year the replacements are needed. With segments being completed as a whole, the target backlog will be 0% for this project.

Condition assessments for fiber (fiber testing / light testing) are completed during fiber installation projects in an attempt to keep fiber clean. Rare occassions require emergency fiber / light testing, so a placeholder for such testing is scheduled once every three years beginning in 2024.

2034	$775,000.00
Total Budget	**$40,550,000.00**

General Project Description:

This project will fund OCS maintenance, repairs, and emergency services. It will provide UTA with OCS infrastructure repair, upgrades, preventative maintenance, and routine maintenance and/or emergency repair services. These funds will also provide training materials, curriculum, and training material submissions to UTA for approval. In-person training, remote training, and on-the-job training to UTA's MOW personnel will be provided as determined by UTA Systems Engineering and UTA MOW management teams. Additional work on OCS systems includes Systems support for TPSS rehabs in 2025, Impulse TPSS integration, disconnect switch status indications, and bypass switch indication.

TDX system upgrades also fall in this category. These upgrades follow the TPSS rehab ending in 2025 and include Siemens 1-click TPSS protection settings.

In addition, OCS wire scans are in this project. OCS wire scans occur once every three years to determine OCS wire diameter and allow he calculations for the remaining contact wire diameter / useful life.

UTAH TRANSIT AUTHORITY

FACILITIES 10-YEAR REHAB/REPLACEMENT PLAN

Years 2025 - 2034

General Descriptions

This is a high level overview of the budget for the 10 year Facilities rehab and replacement plan per individual projects. Each project shows the money that has been budgeted for individual years during the 10 year plan. The sum of the individual projects budgeted money is shown in the total line. The budget numbers for the years 2025 - 2028 were derived from the UTA 5-Year Capital Plan. The budget numbers for 2029 - 2034 were gathered by using the 2024 TERM Lite projection numbers from the constrained raw data file or the most recent model run.
The charts on this page will represent the projects SGR backlog over the course of the 10 years. Some of the charts will show the efforts that will take place in order to hit a certain backlog target percentage.

2033	$800,000
2034	$800,000
Total Budget	**$8,330,000**

General Project Description

This project will cover the rehab and replacement of administration, maintenance, and police buildings throughout UTA. The budget numbers for years 2025 - 2028 were derived from the 5-Year capital budget. These budget numbers will cover the Annual Capital Maintenance (ACM) that will be performed on these facilities buildings. Major projects that will need to be performed on any of these buildings will need to go through the project planning and budget process. Years 2029 - 2034 budget numbers were gathered from the latest constrained raw data file from the most recent model run.
Below will be a projected 5-Year budget that will cover the Building Remodels/Reconfiguration and these budget numbers come strictly from the 5-Year capital budget plan. This will cover any remodels or reconfiguring of UTA building facilities.

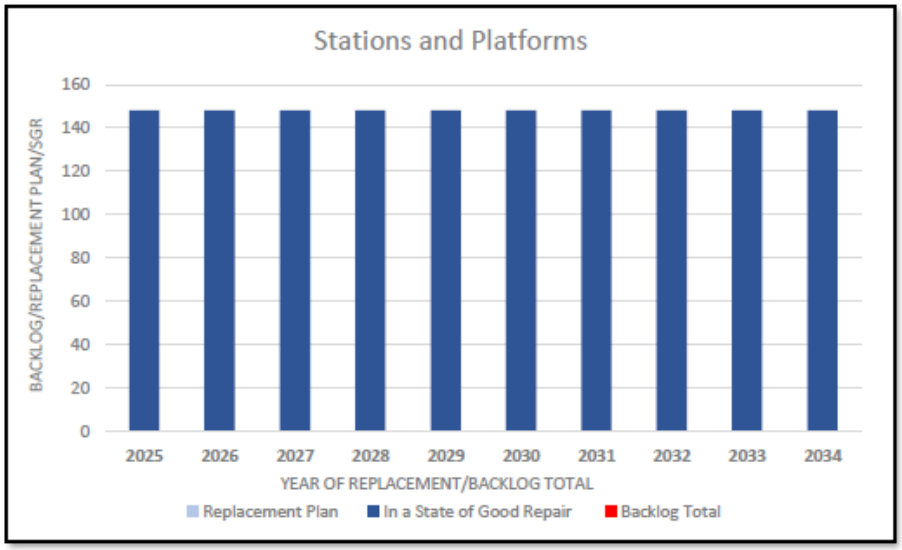
General Project Description

This project will cover station and platforms annual capital maintenance(ACM) and rehab efforts. These stations will need to be evaluated to determine which rehab and replacement activities will be performed. These activities may be minor or major actions depending on results of evaluations. The budget numbers for years 2025 - 2028 were derived from the 5-Year Capital Plan budget. The numbers for these years look to cover the ACM costs that all stations and platforms will require. The budget numbers for years 2029 - 2034 come from the latest constrained model run.



10-YEAR FACILITIES REHAB/REPLACEMENT PLAN

Project Code	FMA672	**Total P&R**	48
Project Name	Park & Ride Rehab/Replacement		

Projected 10 Year Budget:

2025	$400,000
2026	$400,000
2027	$400,000
2028	$400,000
2029	$400,000
2030	$400,000
2031	$400,000
2032	$400,000
2033	$400,000
2034	$400,000
Total Budget	**$4,000,000**

General Project Description

This project will cover the rehab and annual capital maintenance (ACM) of Park and Rides throughout the entire system. Each park and ride will need to be evaluated for what rehab or replacement activities that will need to be performed. Some these items may be minor rehabs or full replacements as needed. One of the most common activities that may occur would be to slurry the parking lot. The budget numbers for years 2025 - 2028 were derived from the 5-Year Capital plan budget. During the years 2029 - 2034 the budget numbers have been taken from the latest constrained model run.

Below will list the items to consider rehab or replacement in the year 2025. These are items that have been rated lower than 3.0 during physical condition assessment. Ratings under 3 are considered marginal and require attention. These items are listed in the SGR Facilities Recommendations booklet.

10-YEAR FACILITIES REHAB/REPLACEMENT PLAN

Project Code	FMA652	**Total Equipment**	255
Project Name	Equipment Managed Reserve	**Target Backlog**	10%

Projected 10 Year Budget:

2025	$800,000
2026	$800,000
2027	$800,000
2028	$800,000
2029	$800,000
2030	$845,000
2031	$0
2032	$0
2033	$0
2034	$0
Total Budget	**$4,845,000**

General Project Description

This project will cover the replacement or rehab of equipment that meets the criteria of being a state of good repair asset. The criteria for equipment being a SGR asset is that its cost is more than $50,000 and has a useful life of more than a year. The budget numbers for years 2025 - 2028 were derived from the 5-Year Capital Plan budget. The budget numbers for years 2029 - 2034 were pulled from the latest constrained model run.
Some of these pieces of equipment may have their useful life extended with rehabs or replacement of parts. Equipment that has exceeded useful life will require an evaluation to see if the equipment can be still be used safely. To maintain a 10% backlog target, one piece of equipment will need to be replaced each year.

UTAH TRANSIT AUTHORITY

REVENUE VEHICLE 10-YEAR REHAB/REPLACEMENT PLAN

Years 2025 -2034

General Description

This is a high level overview of the budget for the 10-Year Revenue Vehicle Rehab and Replacement Plan. Each project displays the money budgeted for individual years during the 10 year plan. The budget numbers for years 2025 - 2028 were derived from the UTA 5-Year Capital Plan. The budget numbers for years 2029 - 2034 were gathered by using the 2024 TERM Lite projection numbers from the constrained raw data file.
The charts on this page represent the projects that will have SGR backlog over the course of the 10 years. The charts represent the efforts necessary to take place to hit the designated target backlog percentage. Each project will give greater detail on the replacement plan that will be needed to maintain the backlog target.

General Project Description

This project will cover the rehab of light rail vehicles during the years 2025 - 2028. The budget for this 4 year period is derived from the 5 year capital plan. Near the end of this 10 year period portions of the SD light rail vehicles will have reached their useful life and will require replacement. Starting in 2026 through 2033 five light rail vehicles will need to be replaced each year to maintain a 10% backlog target. The budget numbers for years 2030 - 2034 come from the latest constrained model run.

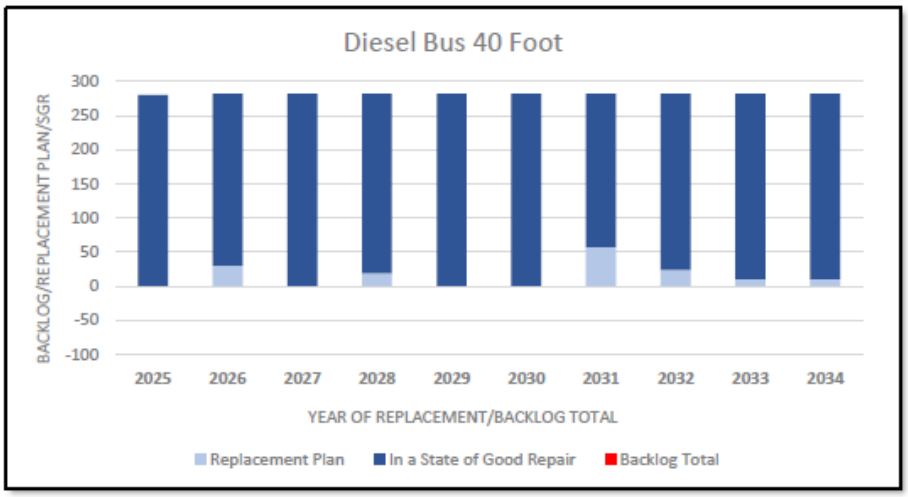
General Project Description

This project will cover the replacement of different types of buses. The buses included in this project are Diesel Bus 40 Foot, MCI Commuter, Hybrid 40 Foot Bus, Ski Bus 35 Foot, Articulated Bus 60 Foot, and CNG 40 Foot Bus. The budget numbers for years 2025 - 2028 were derived from the 5 Year Capital Plan budget. The budget numbers for 2029 - 2034 were taken from the latest constrained model run. Each individual bus type replacement plan amount is based on maintaining a target backlog of 10%. The bus replacement numbers for each year were pulled from the 2024 Bus Replacement Plan.



UTA 10-YEAR REVENUE VEHICLE REHAB/REPLACEMENT PLAN

Project Code	REV209	**Paratransit Gas**	200
Project Name	Paratransit Vehicle Replacement	**Paratransit Diesel**	8
Projected 10 Year Budget:			
2025	$4,851,000	**Target Backlog %**	10%
2026	$3,961,000		
2027	$5,780,000		
2028	$5,967,000		
2029	$0		
2030	$0		
2031	$0		
2032	$1,933,000		
2033	$0		
2034	$0		
Total Budget	**$22,492,000**		

General Project Description

This project will cover the replacement of Paratransit buses both gas and diesel. The budget numbers for years 2025 - 2028 were derived from the 5 Year Capital plan budget. For the years 2029 - 2034 the budgets numbers came from the latest constrained model run. The replacement plan follows the Rubber Tire Replacement plan.

Total Budget	**$17,488,000**

General Project Description

This project will cover the replacement of vans for our vanpool business unit. The budget numbers for years 2025 - 2028 were derived from the 5 year capital plan budget. The budget numbers for years 2029 - 2034 came from the latest constrained model run investment dollars. To maintain a 10% backlog target at completion of the ten year plan 43 vans will need to replaced every year.

UTAH TRANSIT AUTHORITY

NON - REVENUE VEHICLE 10-YEAR REPLACEMENT PLAN

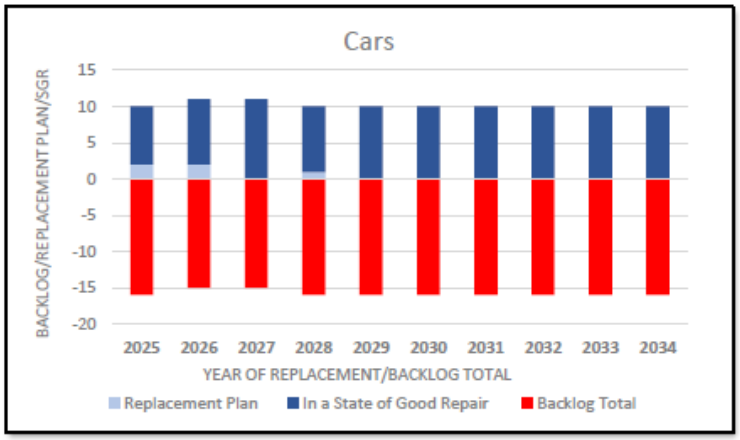
Years 2025 - 2034

10-YEAR NON-REVENUE SERVICE VEHICLE PLAN

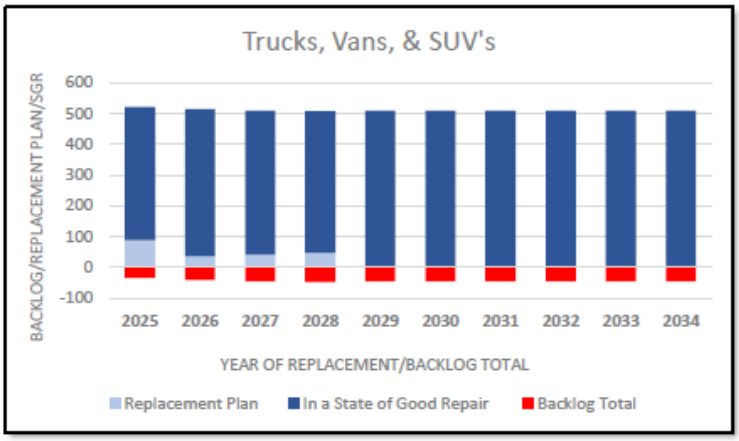
Project Code	REV205	**Non - Rev Vehicles**	**Total**
Project Name	Non - Rev Service Vehicle Replace	**Van/Car**	26
Projected 10 Year Budget:		**Trucks**	555
2025	$5,000,000.00	**Specialty**	111
2026	$3,000,000.00		
2027	$3,000,000.00	**Target Backlog**	10%
2028	$3,000,000.00		
2029	$1,900,000.00		
2030	$0.00		
2031	$3,262,975.00		
2032	$0.00		
2033	$0.00		
2034	$0.00		
Total Budget	**$19,162,975.00**		

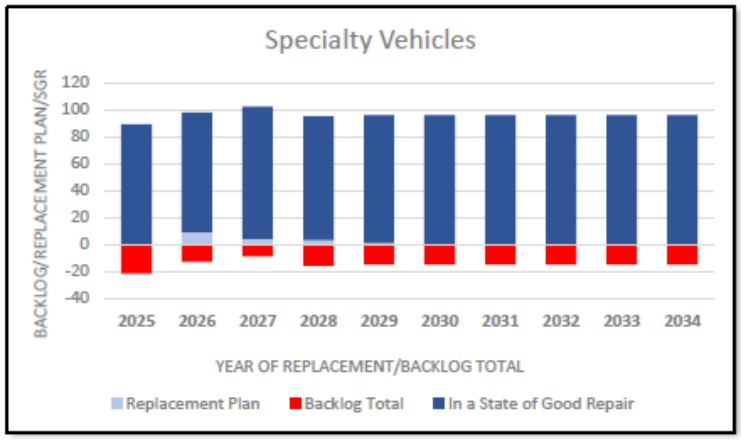
General Project Description:

This project covers the replacement of three types of non - revenue service vehicles. The first type of vehicles will include cars (sedan) type vehicles. The second types of vehicles will be trucks, vans, and SUV's. The third will be specialty vehicles.
The budget numbers for the years 2025 - 2028 were derived from the 5 Year Capital Plan budget. The budget numbers for the years 2029 - 2034 were taken from the most recent constrained model run. The Non-Rev Vehicle team has a drafted vehicle replacement plan that is currently in the first version. This version of the plan will be used to show the reduction of the backlog for the 10 - Year plan. Currently the version of the Non-Rev reduction plan only shows disposals and replacements for year 2025 - 2028. Years 2029 - 2034 will be added as the plan has revisions.



10-YEAR NON-REVENUE SERVICE VEHICLE PLAN





Assets to replace/rehab:

Unit #:

ID	Category	Sub-Category	Condition 1	2	3	4	5	Percentage Sum	Overall Average Condition: Weighted Score	#DIV/0! Average Condition
	Section 1: Applies to Admin/Maintenance Buildings Only									
1	Building Substructure	Foundation, Basement, Superstructure							0.00	0.00
2		Exterior Walls/Envelope							0.00	0.00
3		Exterior Windows							0.00	0.00
4		Exterior Doors							0.00	0.00
5		Roof(Surface,Drain System)							0.00	0.00
6		Skylights							0.00	0.00
7	Building Interior	Partition Walls							0.00	0.00
8		Flooring							0.00	0.00
9		Ceilings							0.00	0.00
10		Interior Doors							0.00	0.00
11		Furnishings							0.00	0.00
12	Conveyance	Elevators & Escalators							0.00	0.00
13		Interior Stairs							0.00	0.00
14		Exterior Stairs							0.00	0.00
15	Plumbing	Drains, Fixtures, Pipes/Valves							0.00	0.00
16	HVAC	Equipment (Heating, AC, Ventilation/Air Handling, & Controls)							0.00	0.00
17		Distribution System							0.00	0.00
18	Fire Protection System	Wet/Dry Systems, Controls, & Emergency Systems							0.00	0.00
19	Electrical	Service, Panels, Wiring, & Outlets/Switches							0.00	0.00
20		Security & Data/Comm							0.00	0.00
21		Emergency Systems (Generator, UPS)							0.00	0.00
22	Building Equipment	Air Compressors, Sump Pumps, & Ejectors							0.00	0.00
23	Maintenance Bays	Maintenance Bays (general)							0.00	0.00
24		Bay Doors							0.00	0.00
25	Shop Equipment	Wastewater Treatment (Sand, Interception, Oil/Water Separators, Water Treatment)							0.00	0.00
26		Paint Booth							0.00	0.00
27		Fuel Systems/Fluid Distribution							0.00	0.00
28		Cranes							0.00	0.00
29	Vehicle Wash	Floor / Substructure							0.00	0.00
30		Drainage							0.00	0.00
31		Building Structure							0.00	0.00
32		Arch/Frame/Gantry							0.00	0.00
33		Bay doors							0.00	0.00
34		Brushes							0.00	0.00
35		Tanks							0.00	0.00
36		Pump							0.00	0.00
37		Water Lines							0.00	0.00
38		High Pressure Nozzles							0.00	0.00
39		Underfloor/Blow-down Cleaning Equipment							0.00	0.00
40		Lighting							0.00	0.00
41		Blower (Veh Interior)							0.00	0.00
42		Dryer							0.00	0.00
43		Vehicle Conveyors							0.00	0.00
44	Fueling Station	Floor/Substructure							0.00	0.00
45		Drainage							0.00	0.00

ID	Category	Sub-Category	Condition					Percentage Sum	Weighted Score	Average Condition
			1	2	3	4	5			
46		Structure/Roof							0.00	0.00
47		Arch/Frame/Gantry							0.00	0.00
48		Bay doors							0.00	0.00
49		Bollards							0.00	0.00
50		Fuel Tanks							0.00	0.00
51		Fuel Pumps, Fuel Lines							0.00	0.00
52		Lighting/Electrical							0.00	0.00
53		Safety Systems							0.00	0.00
54		Securing Systems (Including "payment")							0.00	0.00
55		Fencing							0.00	0.00
56	Site	Storm Water System							0.00	0.00
57		Pavement (Roadways/Driveways, Transit Vehicular, Passenger Vehicle Parking)							0.00	0.00
58		Landscaping & Grounds							0.00	0.00
59		Fencing							0.00	0.00
60		Lighting							0.00	0.00
61		Parking Lot Surface							0.00	0.00
62		ADA Access & Equipment							0.00	0.00
63		Sidewalks							0.00	0.00
	Section 2: Applicable to Stations, Park and Rides / Structures only									
64	Stations/Canopies	Canopy Foundation							0.00	0.00
65		Station Deck							0.00	0.00
66		Station Tactile							0.00	0.00
67		Station Benches							0.00	0.00
68		Canopy Handrails							0.00	0.00
69		Canopy Glass							0.00	0.00
70		Canopy Roof							0.00	0.00
71		High Block/ADA access							0.00	0.00
72	Conveyance	Elevators & Escalators							0.00	0.00
73		Exterior Stairs							0.00	0.00
74	Plumbing	Drains, Fixtures, Pipes/Valves							0.00	0.00
75	HVAC	Equipment (Heating, AC, Ventilation/Air Handling, & Controls)							0.00	0.00

Appendix L- UTA TAM and SGR Policy 06.01

UTAH TRANSIT AUTHORITY

NO. UTA.06.01

TRANSIT ASSET MANAGEMENT & STATE OF GOOD REPAIR POLICY

1) Purpose.

The purpose of this Transit Asset Management (TAM) and State of Good Repair (SGR) policy is to confirm UTA's commitment to maintaining its assets in a manner consistent with what has been prescribed by the Federal Transit Administration. This is in response to the Transit Asset Management Rule contained in the Code of Federal Regulations at 49 CFR Parts 625.

This policy has the specific goals to:

- Clearly define the roles of how agency goals and objectives align with capital plans.
- Defining the roles of critical positions within the TAM Plan and agency coordination efforts.
- Define the relationship between TAM and continuing control.
- Clarification of roles between SGR Group, Accounting and Grants Management.
- Clearly define continuing control assets, SGR assets, financial assets, and the relationship between the three.

This document will outline required elements of the plan, define roles and responsibilities for different departments responsible for meeting the requirements of this rule, and reaffirm UTA's commitment to the SGR initiative.

2) Definitions.

"Transit Asset Management (TAM) Plan" Plan developed and maintained by the SGR Group which outlines UTA's approach to the Management of its assets in conjunction with 49 CFR Part 625.

"SGR Group" means the subgroup of the overall Asset Management Department responsible for the State of Good Repair initiative.

"Asset Management Committee" means Committee of Managers, Directors, Regional General Managers, and others defined in this policy and TAM Plan as being critical to the allocation of resources to maintain UTA's assets. This group will have a role in project prioritization and budget allocation discussions. Members from this group will make up the voting members of the project prioritization based on their designation in the Responsibility Matrix.

"New Projects Process" means projects intended to support expansion and acquisition of new assets or service modes.

"TAM Process" means projects intended to support the rehabilitation, replacement, or enhancement of existing assets.

3) Policy.

In accordance with 49 CFR Parts 625, UTA confirms its commitment to the FTA's SGR initiative and defining the roles and responsibilities necessary to fulfill these requirements.

A. Roles:

Accountable Executive: Per the FTA rule, the Accountable Executive is a single identifiable person who has ultimate responsibility for carrying out transit asset management practices and can control or has direction over the human and capital resources needed to develop and maintain both the agency's public transportation agency safety plan and the agency's transit asset management plan in accordance with 49 U.S.C 5326. The accountable executive is set by Board Resolution and is the Executive Director of the Utah Transit Authority.

The SGR Group: This group has responsibility for developing the overall SGR approach at UTA. This group is responsible for the generation and updating of UTA's Transit Asset Management Plan and Group Sponsor plans for its sub recipients who receive funding under the FAST Act (49 USC5301 et .seq.). This group is also responsible for the reporting of UTA's progress relative to its goals identified in its Transit Asset Management Plan.

UTA Managers over Capital Assets: In order to be compliant with the Transit Asset Management rule, there will need to be a large amount of information shared between groups. This includes information relative to budgets, maintenance records, purchase records, and other information as deemed necessary as described in the plan. A responsibility matrix is included at the end of this document.

B. TAM Plan Requirements:

The Transit Asset Management Plan will be the governing document by which the SGR initiative will be outlined, prescribed and carried out. The Transit Asset Management Plan will contain all information needed in order to be compliant with 49 CFR Part 625. The elements of the plan are:

1) An inventory of the number and type of capital assets. The inventory must include all capital assets that a provider owns, except equipment with an acquisition value under $50,000 that is not a service vehicle.
    a. This inventory must also include third-party owned or jointly procured exclusive-use maintenance facilities, passenger station facilities, administrative facilities, rolling stock and guideway infrastructure used by a provider in the provision of public transportation.
    b. The asset inventory must be organized at a level of detail commensurate with the level of detail in the provider's program of capital projects.
2) A condition assessment of those inventoried assets for which a provider has direct capital responsibilities.

3) A description of analytical processes or decision-support tools that a provider uses to estimate capital investments needs over time and develop its investment prioritization.
4) A project-based prioritization of investments.
5) TAM & SGR Policy.
6) TAM Plan implementation strategy.
7) Description of key TAM activities that a provider intends to engage in over the TAM plan horizon period. The FTA defines the horizon period as four years.
8) A summary or list of resources including personnel that a provider needs to develop and carry out the TAM plan.
9) An outline of how UTA will monitor, update, and evaluate as needed, its TAM plan and related business practices, to ensure the continuous improvement of its TAM practices.

C. Version Control and Approvals:

Every two years, the SGR Group will provide a revision of the Transit Asset Management Plan to the Managers of the groups who have assets covered in the plan for their review. After it has been reviewed and comments sufficiently addressed to the extent possible, the plan will be presented to the UTA Board of Trustees and Executive Director for their approval. The plan will be reviewed and recertified every two years.

Every year, performance targets will need to be established and will need to be approved by the Executive Director. The SGR Group will submit updated performance targets for review to the Asset Management Committee for their review and approval. After that, the performance targets will then be submitted to the Executive Director for their approval. The updated performance targets will then be inserted into the TAM Plan in Appendix D to ensure the most current performance targets are maintained as part of the Transit Asset Management Plan.

D. Budget Requirements:

To maintain budget continuity between departments, the SGR Group will develop its Five-Year Budget look-ahead every year in conjunction with feedback from UTA managers via a budget review process. This five-year look-ahead will be blended with the 5-Year Capital Plan to produce an overall Five-Year Capital Plan.

The Director of Capital Projects will provide the Manager- State of Good Repair with a list of projects that were funded and unfunded. Unfunded projects will remain in the budget consideration pool until they are either funded or are ultimately removed. The Manager-State of Good Repair will make sure their records reflect which projects were funded and which projects were unfunded and will be up for reconsideration the following year.

These budgets will be provided to the Finance Department for incorporation into the Transit Financial Plan (TFP). Prior to submission to the Board, the Chief Operating Officer, the Chief Service Development Officer and Chief Financial Officer will need to agree on the numbers being brought into the TFP.

E. Inventory Requirements:

JD Edwards is considered the system of record for all asset inventory as it relates to the TAM effort. There are three types of assets at UTA (land is excluded from the TAM considerations). The three types of assets are defined in SOP 2.1.3.1 Asset Recordkeeping and Continuing Control:

- Financial Asset: General asset with acquisition value over $5000, rail infrastructure asset with value over $50,000, and software with acquisition value over $10,000 with useful life of more than one year and owned by UTA.
- Continuous (Continuing) Control Asset: Grant-Funded asset of any amount whether owned by UTA or by a grant sub-recipient.
- TAM Asset: Financial asset involved in provision of service such as infrastructure, facilities, and vehicles all capital assets that a provider owns, except equipment with an acquisition value under $50,000 that is not a service vehicle.

Financial assets should make up the base of inventory for UTA; continuing control assets, and TAM assets would be designated from the base inventory. An asset may be designated to one, two or three of the inventory categories. The assignment of appropriate category or categories is to happen upon asset record creation as defined in SOP 2.1.3.1 Recordkeeping section 3A.

F. Business Goals and Objectives:

Strategic business goals are defined and reviewed by the executive team every two years, starting for the fiscal year 2021. These goals and objectives will be stated in the TAM Plan. Goals and objectives should show guidance on expansion, renewals, replacements per the Five-Year Capital Plan, and SGR backlog target dollar amounts.

G. Key Manager Responsibility Matrix:

Title	TAM Responsibility	Committee Member	Prioritization Phase
Capital Project Managers	Upon project completion, provide list of capital assets acquired during project and associated O&M materials to appropriate business units. Refers to any Capital Project Manager regardless of business unit they belong to.	By invitation	
Comptroller	Inventory record upkeep including creation, update, and disposals.	X	
Project Manager Environmental, Grants, Projects controls	Responsible for identification of funding opportunities for replacement and renewals of assets.	X	

SGR Manager	TAM Plan upkeep, SGR budget projections, National Transit Database (NTD) performance target reporting, group TAM plan, initial investment prioritization criteria development, identification of TAMS assets and associated data. Provides appropriate managers with lists of anticipated needs for upcoming budget cycles.	X	Initial
Facility Manager	Responsible for condition assessments of maintenance, administration, stations, and passenger parking facilities and providing information to the SGR Manager. Also responsible for identification and/or verification of facility needs to SGR Manager. Point of contact for facility requests.	X	Initial
Manager of Vehicle Overhaul and Support	Responsible for Fleet Management plans and coordination with SGR Manager for business unit needs related to revenue and non-revenue service vehicles. Point of contact for all vehicle requests.	X	Initial
Manager of ROW Assets	Responsible for identification and/or verification of civil infrastructure needs and coordination with SGR Manager for those needs.	X	Initial

Title	TAM Responsibility	Committee Member	Prioritization Phase
Manager of Systems Engineering	Responsible for identification and/or verification of systems infrastructure needs and coordination with SGR Manager for those needs.	X	Initial
Rail Infrastructure Project Manager	Responsible for identification and/or verification of civil rail infrastructure needs and coordination with SGR Manager for those needs.	X	Initial
Manager of Service Planning	Responsible for supplying anticipated vehicle needs for service efforts including quantity and types for the different modes.	X	Initial

Senior Program Manager-Engineering & Project Development	Participates in the committee meetings and participates in the initial prioritization phase of the projects	X	Initial
Safety Director Appointee	Participates in the committee meetings and participates in the initial prioritization phase of the projects	X	Initial
IT Director Appointee	Participates in the committee meetings and participates in the initial prioritization phase of the projects	X	Initial
Director of Capital Projects	Responsible for overall five-year capital budget production, initial criteria development for new capital projects, and final prioritization criteria for all capital projects. Responsible for coordinating the final investment prioritization effort prior to the executive review.	X	Final
Director of Engineering and Maintenance Support	Oversees TAM efforts and has role in final prioritization. Responsible for approval/finalization of the SGR Five Year Plan portion of the Five-Year Capital Plan	X	Final
RGM/Department Director	Ogden, Commuter Rail, Light Rail, Meadowbrook/Central, Timpanogos, Special Service, Safety, IT, & Engineering and Maintenance Support RGMs or Directors. Will communicate business needs to appropriate point of contact manager for inclusion for five-year plan consideration.	X	Final
Director of Planning	Responsible for development of future long-term plans. Responsible for identification of major alterations/considerations that should be	X	Final
Title	TAM Responsibility	Committee Member	Prioritization Phase
	incorporated into future budget projections.		
Project Development - Systems Plan Manager	Responsible for facilities master plan and coordination with SGR Manager for incorporation with appropriate plans.	X	Final

Chief Office Designee	Responsible for communication of business needs and objectives and to oversee the committee.	X	Final & executive review
Executive Team	Approve initial and final project prioritization criteria for SGR projects, new projects, and the combined project prioritization review. Conducts final executive review for budget requests and proposed allocations.		Final executive review

H. Investment Prioritization Guidelines:

Investment prioritization should be designed to support business objectives and priorities. The business goals and objectives provide guidance around expectations regarding service efforts and capital project emphasis. The business goals and objectives are intended to inform project prioritization criteria to allow projects to be ranked on their merits and how well they align with the overall business goals and objectives. The Executive Team will be responsible for producing overall business goals and objectives.

Project prioritization efforts are intended to quantify and qualify the projects based on their support of the business objectives, and corresponding risk factors. However due to project size, scope, and available funding, the projects may not necessarily be funded based solely on priority. The final funding allocation will be at the Executive Team's discretion and ultimately Board approval.

I. Plan Alignment

To provide a cohesive strategy UTA will need to coordinate certain plans with business goals and objectives. Below is a table that is intended to provide guidance on how the different plans could feed into each other to help maintain continuity between all the different departmental efforts.

Plan	Inputs	Outputs
Business Goals and Objectives	Stakeholder requirements and possible internal recommendations	Expectations revolving around service, goals, and priorities
Service Plans	Take expectations from business goals and objectives and develops appropriate service plans.	Provides vehicle needs to appropriate fleet management plans including capacity and quantity requirements for the service plans
Fleet Management Plans	Take vehicle capacity and quantity requirements from service plans and translates that into fleet management plans identifying overhaul needs/schedules if	Overhaul needs and replacement cycles are incorporated into the TAM Plan.

Plan	Inputs	Outputs
	appropriate and replacement cycles.	New/Expansion vehicle plans are provided to the Five-Year Capital Plan.
Facility Master Plan	Takes business goals and objectives and provides guidance around long-term facility needs including necessary remodels or new build projects needed to achieve anticipated future requirements.	Buildings that need to be remodeled will go through the TAM Process. Buildings that are new or expansion buildings will need to go through the new capital project process.
TAM Plan	Recommendations from fleet management plan and facility master plans as well as condition data from existing inventory.	Produces a project prioritization for SGR/TAM projects and consolidates information for incorporation into the five-year plan.
Five-Year Capital Plan	Takes project recommendations from the TAM plan including prioritization rankings and consolidates it with the new projects requests to develop an overall five-year capital plan.	Prioritized list of all capital projects to move forward to funding allocation.

J. Distinguishing Continuing Control from SGR (TAM) Efforts:

Since FTA C 5010.1E (Award Management Requirements) and 49 CFR 625 (Transit Asset Management Requirements) both contain language dealing with asset management that is conflicting in some cases and similar in other cases, this Policy seeks to distinguish the scope of the two federal regulations from one another. Continuing control of assets and management of transit assets are separate and distinct efforts.

Continuing Control requirements are covered under FTA Circular 5010.1E. Specifically, this FTA Circular contains asset inventory records requirements regarding physical protection and record keeping. It applies to federally funded assets with a value greater than $5000. The responsibilities for the Continuing Control efforts are defined in the UTA SOP 2.1.3.1 Asset Recordkeeping and Continuing Control

Transit Asset Management (TAM) requirements are covered in the Code of Federal Regulations at 49 CFR 625. The TAM effort is primarily focused on the renewal and replacement of assets regardless of the funding source based on the classification of the asset as described in paragraph 3(E) above.

4) Cross-References

- Code of Federal Regulations at 49 CFR Part 625 Transit Asset Management Rule
- Agency SOP 2.1.3.1 Asset Recordkeeping and Continuing Control

- Board Policy 2.1 – Financial Management
- FTA Circular 5010.1E Award Management Requirements

This UTA Policy was reviewed by UTA's Chief Officers on November 17, 2020, by the Board of Trustees on February 24, 2021, and approved by the Executive Director on February 24, 2021. This policy takes effect on the latter date.

This Appendix will house the most recent condition assessment for UTA's administration, maintenance, and parking assets.

Appendix M is intentionally left blank to reduce TAM Plan document size

Appendix N – 2025 SGR Project Prioritization

State of Good Repair Program Scoring

TERM Lite Values:
Priority Score Min is the Minimum TERM-Lite Value in the priority section for the assets being considered in a particular year.
Priority Score Max is the Maximum TERM-Lite Value in the priority section for the assets being considered in a particular year.
Priority Score Average is the Average TERM-Lite Value in the priority section for the assets being considered in a particular year.

Prioritization Score Valuation Guide:
In order to establish a value greater than 1 on the Public Safety Consideration, raters must first establish an existing public safety hazard and then consider the improvement

1- No improvement
2- Minimal improvement
3- Marginal improvement
4- Moderate improvement
5- Significant improvement
Overall Score is the sum of the three values

Risk Considerations:
Scale on 1-5. 1 being no risk, 5 being catastrophic.
1- No Risk
2- Minimal Risk
3- Moderate Risk
4- Major Risk
5- Catastrophic Risk
Total Risk Score is the product of the two items

	TERM Lite Values			Prioritization Score					Correlation Factor	Risk Considerations		Graph Values

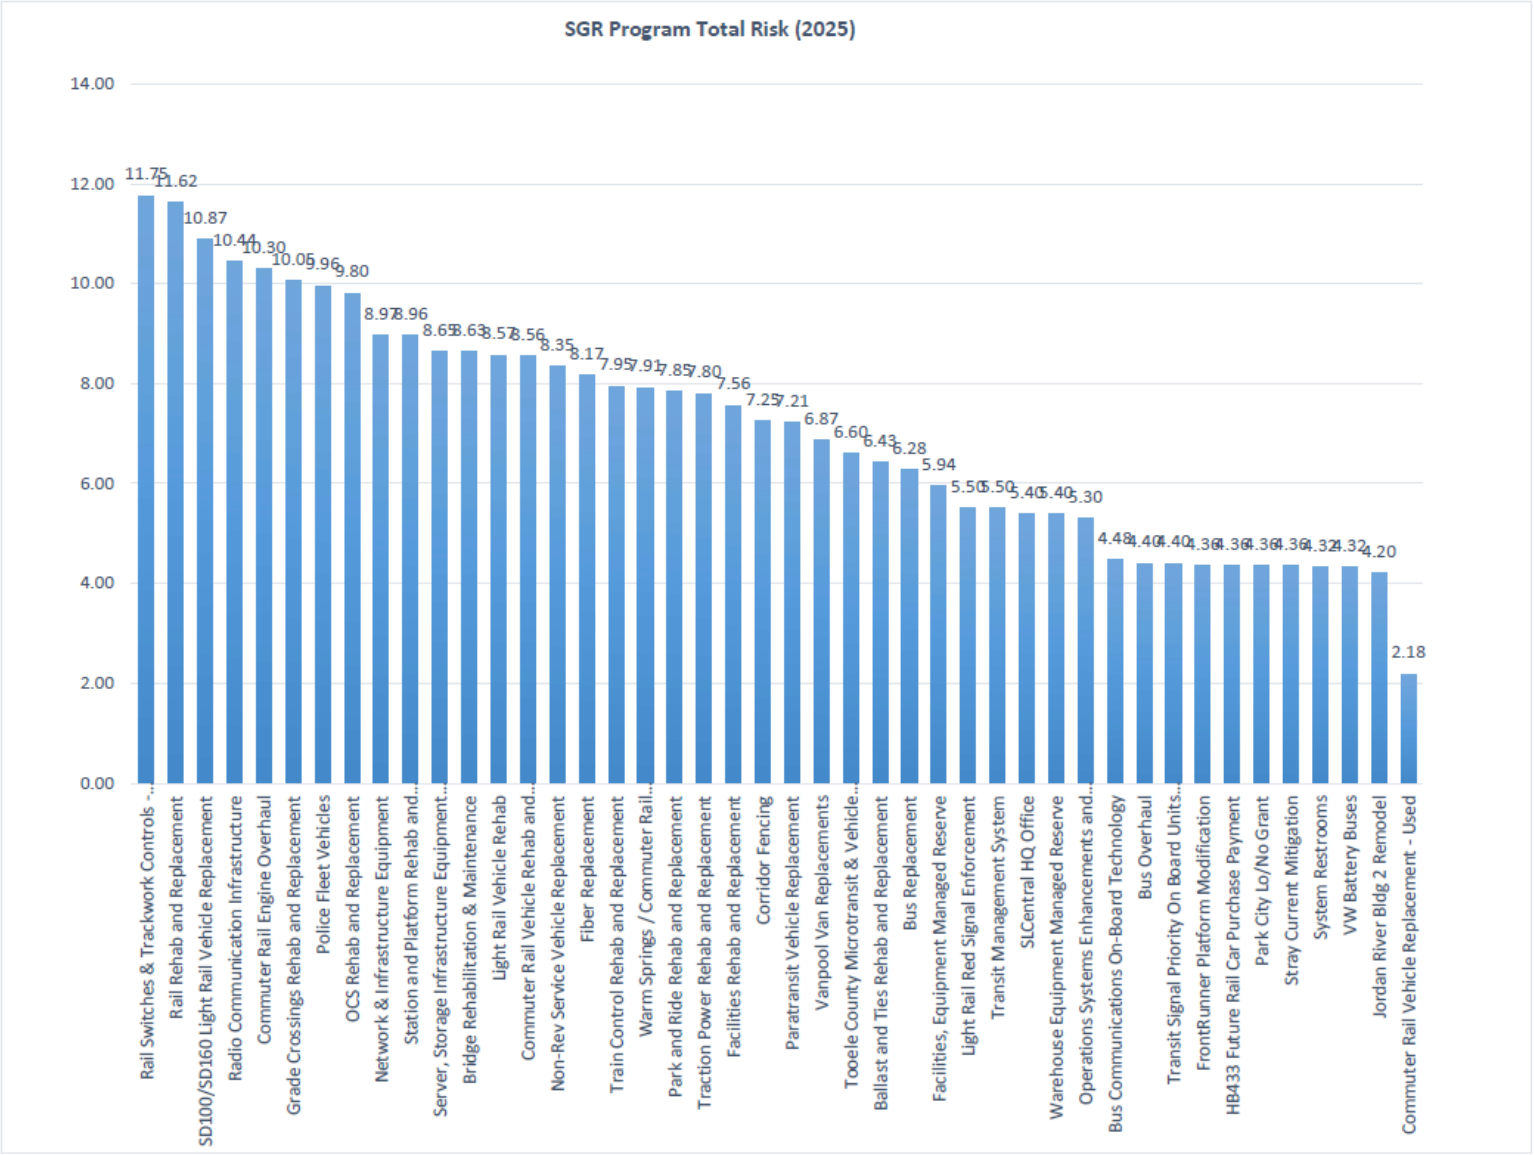
SGR Program Total Risk Sheet



Investment Prioritization Excerpt- SGR Program 2025-2029 Five Year Capital Plan

Project Code	Project Name	Total Risk	Total Rank	2025	2026	2027	2028	2029
SGR404	Rail Switches & Trackwork Controls - Rehab/Replacement	11.75	1	$ 500,000	$ 4,500,000	$ 1,600,000	$ 1,400,000	
SGR385	Rail Rehab and Replacement	11.62	2	$ 6,200,000	$ 2,435,000	$ 4,500,000	$ 3,987,000	
REV238	SD100/SD160 Light Rail Vehicle Replacement	10.87	3	$ 36,000,000	$ 36,000,000	$ 37,900,000	$ 120,000,000	
ICI226	New Radio Communication System	10.44	4	$ 7,000,000	$ 500,000	$ 150,000	$ 150,000	
SGR353	Commuter Rail Engine Overhaul	10.30	5					
SGR393	Grade Crossings Rehab and Replacement	10.05	6	$ 4,500,000	$ 2,200,000	$ 2,200,000	$ 4,000,000	
FMA543	Police Fleet Vehicles	9.96	7	$ 605,000	$ 605,000	$ 605,000	$ 385,000	
SGR398	OCS Rehab and Replacement	9.80	8	$ 5,900,000	$ 10,000,000	$ 10,000,000	$ 10,000,000	
ICI179	Network & Infrastructure Equipment	8.97	9	$ 939,000	$ 279,000	$ 150,000	$ 150,000	
FMA673	Station and Platform Rehab and Replacement	8.96	10	$ 434,000	$ 200,000	$ 200,000	$ 200,000	
ICI201	Server, Storage Infrastructure Equipment and Software	8.65	11	$ 394,000	$ 200,000	$ 173,000	$ 1,050,000	
SGR359	Bridge Rehabilitation & Maintenance	8.63	12	$ 420,000	$ 440,000	$ 460,000	$ 500,000	
SGR040	Light Rail Vehicle Rehab	8.57	13	$ 11,000,000	$ 9,000,000	$ 9,000,000	$ 9,000,000	
SGR391	Commuter Rail Vehicle Rehab and Replacement	8.56	14	$ 3,750,000	$ 3,750,000	$ 3,750,000	$ 3,750,000	
REV205	Non-Rev Service Vehicle Replacement	8.35	15	$ 5,000,000	$ 3,000,000	$ 3,000,000	$ 3,000,000	
SGR410	Fiber Replacement	8.17	16	$ 1,519,000	$ 679,000	$ 682,000	$ 686,000	
SGR403	Train Control Rehab and Replacement	7.95	17	$ 10,900,000	$ 9,467,000	$ 9,900,000	$ 10,400,000	
FMA692	Warm Springs / Commuter Rail Maintenance & Ops Facility	7.91	18	$ 3,500,000	$ 6,000,000	$ 20,000,000	$ 5,500,000	
FMA672	Park and Ride Rehab and Replacement	7.85	19	$ 400,000	$ 400,000	$ 400,000	$ 400,000	
SGR397	Traction Power Rehab and Replacement	7.80	20	$ 4,300,000				
FMA653	Facilities Rehab and Replacement	7.56	21	$ 1,130,000	$ 800,000	$ 800,000	$ 800,000	
FMA516	Corridor Fencing	7.25	22	$ 60,000	$ 60,000	$ 60,000	$ 60,000	
REV209	Paratransit Vehicle Replacement	7.21	23	$ 4,851,000	$ 3,961,000	$ 5,780,000	$ 5,967,000	
REV232	Vanpool Van Replacements	6.87	24	$ 1,716,000	$ 1,757,000	$ 1,800,000	$ 1,843,000	
REV234	Tooele County Microtransit & Vehicle Electrification	6.60	25	$ 125,000				
SGR401	Ballast and Ties Rehab and Replacement	6.43	26	$ 300,000	$ 300,000	$ 300,000	$ 300,000	
REV211	Bus Replacement	6.28	27	$ 30,000,000	$ 30,000,000	$ 30,000,000	$ 30,000,000	
FMA652	Facilities, Equipment Managed Reserve	5.94	28	$ 800,000	$ 800,000	$ 800,000	$ 800,000	
ICI217	Transit Management System	5.50	30					
SGR370	Light Rail Red Signal Enforcement	5.50	29	$ 3,409,000	$ 2,863,000			
FMA686	Warehouse Equipment Managed Reserve	5.40	32	$ 94,000	$ 55,000	$ 123,000	$ 36,000	
MSP262	SLCentral HQ Office	5.40	31					
ICI230	Operations Systems Enhancements and Replacement	5.30	33	$ 2,150,000	$ 1,500,000	$ 750,000		
ICI197	Bus Communications On-Board Technology	4.48	34	$ 200,000	$ 200,000	$ 200,000	$ 200,000	
MSP270	Transit Signal Priority On Board Units (TOBU) Project	4.40	36	$ 1,711,000	$ 933,000	$ 449,000	$ 449,000	
REV224	Bus Overhaul	4.40	35	$ 1,500,000	$ 1,500,000	$ 1,500,000	$ 1,500,000	
REV239	HB433 Future Rail Car Purchase Payment	4.36	38	$ 5,000,000	$ 5,000,000	$ 5,000,000	$ 5,000,000	
MSP282	FrontRunner Platform Modification	4.36	37					
REV212	Park City Lo/No Grant	4.36	39					
SGR047	Stray Current Mitigation	4.36	40	$ 526,000	$ 542,000	$ 558,000	$ 575,000	
REV236	VW Battery Buses	4.32	42					
SGR409	System Restrooms	4.32	41	$ 2,245,000	$ 1,120,000	$ 1,120,000		
SGR390	Jordan River Bldg 2 Remodel	4.20	43	$ 5,500,000	$ 2,000,000			
REV233	Commuter Rail Vehicle Replacement - Used	2.18	44	$ 5,500,000	$ 5,000,000			

Appendix O – UTA Five-Year Capital Plan, 2024 - 2028

2024-2028 Five Year Capital Plan

Total Chief Office/Project Name	2024 Total Budget	2025 Total Budget	2026 Total Budget	2027 Total Budget	2028 Total Budget	2024-2028 Budget
Capital Services	206,515,000	275,072,000	228,033,000	168,750,000	228,986,000	1,107,356,000
FMA516 - Corridor Fencing	62,000	60,000	60,000	60,000	60,000	302,000
FMA679 - Building Remodels/Reconfigurations	1,465,000	1,290,000	1,190,000	1,040,000	540,000	5,525,000
FMA680 - Suicide Prevention Research Project	221,000	-	-	-	-	221,000
FMA687 - Layton Station Improvements	72,000	550,000	-	-	-	622,000
FMA690 - Facility Program Development & Design	750,000	150,000	150,000	-	-	1,050,000
FMA692 - Warm Springs Upgrades	-	3,500,000	6,000,000	20,000,000	5,500,000	35,000,000
FMA693 - Meadowbrook Electrification	231,000	1,786,000	1,836,000	-	-	3,853,000
FMA694 - Electric Bus Chargers	-	500,000	2,065,000	2,065,000	2,065,000	6,695,000
FMA695 - Facility Program	-	-	-	-	-	-
MSP102 - Depot District	500,000	-	-	-	-	500,000
MSP132- IPCS Tech Support	43,000					43,000
MSP140 - Box Elder County Corridor Preservation	550,000	2,300,000	2,300,000	2,300,000	2,300,000	9,750,000
MSP156- Prop 1 Davis County	923,000					923,000
MSP185 - Ogden/Weber State University BRT	5,600,000	-	-	-	-	5,600,000
MSP189 - Signal Pre-emption Projects w/UDOT	114,000	-	-	-	-	114,000
MSP193 - Weber County Corridor Preservation	250,000	2,700,000	2,700,000	-	-	5,650,000
MSP202 - Davis-SLC Community Connector	2,200,000	3,400,000	-	-	-	5,600,000
MSP205- Tiger Program of Projects	2,042,000					2,042,000

MSP207 - 3300/3500 South Max EXP\Optimization	2,361,000	-	-	-	-	2,361,000
MSP208 - Clearfield FR Station Trail	2,210,000	-	-	-	-	2,210,000
MSP215 - Sharp/Tintic Rail Corridor Connection	1,145,000	1,145,000	-	-	-	2,290,000
MSP216 - Point of the Mountain Transit	1,500,000	500,000	500,000	500,000	1,000,000	4,000,000
MSP224 - UTA ADA Bus Stop Improvements UTCO	378,000	378,000	-	-	-	756,000
MSP228- Operator Restrooms in Salt Lake County	61,000					61,000
MSP229 - Bus Stop Improvements & Signing in Salt Lake County	1,563,000	-	-	-	-	1,563,000
MSP231- Operator Shack at University Medical EOL	84,000					84,000
MSP240 - Operator Restrooms throughout System	2,685,000	-	-	-	-	2,685,000
MSP247- Light Rail Seat Replacement	250,000					250,000
MSP248 - Planning & Environmental Analysis	1,150,000	300,000	300,000	300,000	300,000	2,350,000
MSP252 - FrontRunner Strategic Double Tracking Project	2,000,000	2,000,000	2,000,000	2,000,000	2,000,000	10,000,000
MSP253 - Mid-Valley Connector	10,000,000	45,700,000	44,987,000	-	-	100,687,000
MSP254 - TechLink	1,250,000	-	-	-	-	1,250,000
MSP255 - Central Corridor	100,000	-	-	-	-	100,000
MSP257- Gap Filler on FR Stations	681,000					681,000
MSP258 - Mt. Ogden Amin Bldg. Expansion	1,330,000	5,355,000	5,020,000	-	-	11,705,000
MSP259 - S-Line Extension	4,000,000	11,746,000	-	-	-	15,746,000
MSP260 - Westside Express (5600 West)	3,500,000	16,500,000	15,000,000	8,122,000	-	43,122,000
MSP262 - SLCentral HQ Office	4,220,000	-	-	-	-	4,220,000
MSP263 - TOD Working Capital	394,000	688,000	688,000	688,000	688,000	3,146,000

MSP264 - FrontRunner Extension to Payson	3,130,000	3,080,000	3,080,000	-	-	9,290,000
MSP265 - Program Management Support	1,970,000	3,000,000	3,000,000	3,000,000	3,000,000	13,970,000
MSP267 - New Maintenance Training Facility	3,143,000	5,229,000	714,000	-	-	9,086,000
MSP271 - MOW Training Yard	4,245,000	2,607,000	587,000	-	-	7,439,000
MSP272 - TRAX Operational Simulator	1,384,000	-	-	-	-	1,384,000

Total Chief Office/Project Name	2024 Total Budget	2025 Total Budget	2026 Total Budget	2027 Total Budget	2028 Total Budget	2024-2028 Budget
MSP274 - Historic Utah Southern Rail Trail	-	-	-	-	-	-
MSP275 - Station Area Planning	1,239,000	-	-	-	-	1,239,000
MSP283 - ROW & Facility Property Opportunity Buy	1,000,000	1,000,000	1,000,000	1,000,000	1,000,000	5,000,000
MSP286 - Utah County Park & Ride Lots	1,000,000	3,585,000	-	-	-	4,585,000
MSP287 - 900 East UVX Station	4,200,000	-	-	-	-	4,200,000
MSP288 - Sustainability Project Pool	350,000	100,000	100,000	100,000	100,000	750,000
MSP289 - Historic Orchard Pathway (Box Elder County)	206,000	-	-	-	-	206,000
MSP290- Orange Street Microtransit	14,000					14,000
MSP293 - Shephard Lane Betterment with UDOT for future FrontRunner Double Tracking	100,000	3,700,000	-	-	-	3,800,000
MSP300 - New TRAX platform in South Jordan	4,500,000	1,500,000	-	-	-	6,000,000
MSP301 - Federal Bus Stops 5339	802,000	802,000	717,000	-	-	2,321,000
MSP312 - Point of the Mountain FrontRunner Station	300,000	300,000				600,000
MSP313 - Electric Charger Program	-	-	-	-	-	-
REV205 - Replacement Non-Revenue Support Vehicles	6,712,000	5,000,000	3,000,000	3,000,000	3,000,000	20,712,000

REV209 - Paratransit Replacements	11,581,000	4,851,000	3,961,000	5,780,000	5,967,000	32,140,000
REV211 - Replacement Buses	5,226,000	30,000,000	30,000,000	30,000,000	30,000,000	125,226,000
REV212 - Park City Lo/No Grant	998,000	-	-	-	-	998,000
REV224 - Bus Overhaul	1,500,000	1,500,000	1,500,000	1,500,000	1,500,000	7,500,000
REV232 - Van Pool Van Replacements	3,685,000	1,716,000	1,757,000	1,800,000	1,843,000	10,801,000
REV233 - Commuter Rail Vehicle Procurement - Used	500,000	5,500,000	5,000,000	-	-	11,000,000
REV236 - VW Battery Buses	7,391,000	-	-	-	-	7,391,000
REV238 - SD100/SD160 Light Rail Vehicle Replacement	10,000,000	36,000,000	36,000,000	37,900,000	120,000,000	239,900,000
REV240 - Motor Pool Key Management System	330,000	-	-	-	-	330,000
REV241 - NRV Ancillary Equipment (Trailers, etc.)	100,000	100,000	100,000	100,000	100,000	500,000
REV242 - Replacement Non-rev equipment/special vehicles	500,000	500,000	500,000	500,000	500,000	2,500,000
SGR040 - Light Rail Vehicle Rehab	9,500,000	11,000,000	9,000,000	9,000,000	9,000,000	47,500,000
SGR047 - LRT Stray Current Control	511,000	526,000	542,000	558,000	575,000	2,712,000
SGR353 - Commuter Rail Engine Overhaul	4,348,000	-	-	-	-	4,348,000
SGR359 - Bridge Rehabilitation & Maintenance	444,000	420,000	440,000	460,000	500,000	2,264,000
SGR370 - Red Signal Enforcement	4,306,000	3,409,000	2,863,000	-	-	10,578,000
SGR385 - Rail Replacement Program	6,100,000	6,200,000	2,435,000	4,500,000	3,987,000	23,222,000
SGR390 - Jordan River #2 Remodel	5,500,000	5,500,000	2,000,000	-	-	13,000,000
SGR391 - Commuter Rail Vehicle Rehab and Replacement	1,000,000	3,750,000	3,750,000	3,750,000	3,750,000	16,000,000
SGR393 - Grade Crossing Replacement Program	4,689,000	4,500,000	2,200,000	2,200,000	4,000,000	17,589,000
SGR397 - TPSS Component Replacement	15,588,000	4,300,000	-	-	-	19,888,000

SGR398 - OCS Rehab/Replace	3,400,000	5,900,000	10,000,000	10,000,000	10,000,000	39,300,000
SGR401 - Ballast and Tie replacement	300,000	300,000	300,000	300,000	300,000	1,500,000
SGR403 - Train Control Rehab & Replacement	6,062,000	10,900,000	9,467,000	9,900,000	10,400,000	46,729,000
SGR404 - Rail Switches & Trackwork Controls Rehab/Replacement	4,400,000	500,000	4,500,000	1,600,000	1,400,000	12,400,000
SGR407 - Bus Stop Enhancements	3,049,000	1,275,000	1,275,000	1,275,000	1,275,000	8,149,000
SGR408 - Route End of Line (EOL) Enhancements	225,000	1,650,000	1,650,000	1,650,000	1,650,000	6,825,000
SGR409 - System Restrooms	1,685,000	2,245,000	1,120,000	1,120,000	-	6,170,000
SGR410 - Fiber Rehab/Replacement	3,352,000	1,519,000	679,000	682,000	686,000	6,918,000
SGR411 - Farmington Ped Bridge Repairs	65,000	560,000	-	-	-	625,000
Enterprise Strategy	10,748,000	14,328,000	6,274,000	3,398,000	2,875,000	37,623,000
